submissions:

**closed (29 February 2024)**

### Message from the Guest Editors

Dear Colleagues,

Soft robotics is a fascinating research field that integrates material sciences, robotics and biology to create the next generation of robots that can better adapt to natural environments with complex uncertainties and human-centric operations with strict safety requirements. As one of the core components of soft robots, soft actuators have constantly been the research focus of this particular field. Over the last decade, we have witnessed the rapid development of many novel soft actuators, such as pneumatic and electroactive polymers, which have enabled the agile locomotion and complex task operations of soft robots. These include achieving a more efficient/effective actuation of soft actuators through clever and elegant design; developing rapid, yet reliable, fabrication techniques to replace conventional, time-consuming casting for soft actuators; and developing novel applications for these soft actuators that exhibit their true potential in real-world settings.

This Special Issue will be devoted to state-of-the-art research on soft actuators, including the design, fabrication and applications of soft actuators.

an Open Access Journal by MDPI

## Editor-in-Chief

## Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

**Journal Rank:** JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)
