Plant-N-Cycling Microorganisms Interactions in the Rhizosphere

Guest Editors:

Prof. Dr. Eiko Kuramae

Department of Microbial
Ecology, Netherlands Institute of
Ecology, 6708 PB Wageningen,
The Netherlands
Ecology and Biodiversity,
Institute of Environmental
Biology, Utrecht University, 3584
CS Utrecht, The Netherlands

Dr. Pierfrancesco Nardi

Consiglio per la ricerca e l'analisi dell'economia agraria (Crea), Centro di ricerca Agricoltura e Ambiente – Research Centre for Agriculture and Environment, 00184 Roma, Italy

Deadline for manuscript submissions: closed (31 December 2021)

Message from the Guest Editors

Nitrogen (N) is an essential element for all life forms and the major limiting nutrient in plant growth. To satisfy the N demand of plants, huge amounts of N fertilizers are applied to agricultural soils. However, up to half or even more of the applied N is lost to the environment, causing adverse effects on pollution, climate change, and human health. Therefore, reducing anthropogenic pressures on the N cycle remains one of the most challenging problems and a crucial goal in N research.

Plants play an active role in shaping the structure and function of N cycling microbial communities that inhabit the rhizosphere, but a mechanistic understanding of these interactions is still lacking. Addressing this issue, however, is essential to achieving better soil N management and improving the sustainability of agriculture.

In this Special Issue, we encourage submissions of theorydriven studies that provide mechanistic insights into the relationships between plants and N-cycling microorganisms as they occur in and are affected by the rhizosphere, as well as holistic studies embracing such complex relationships and their spatiotemporal variability.

Editor-in-Chief

Dr. Nico Jehmlich

Department of Molecular Toxicology, UFZ-Helmholtz Centre for Environmental Research, 04318 Leipzig, Germany

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in highquality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))
