Deadline for manuscript
submissions:

closed (31 July 2019)

Message from the Guest Editors

Dear Colleagues,

The rapid increase of concentrations of greenhouse gases, anthropologically-generated (primarily CO₂) in the atmosphere, is responsible for global warming and ocean acidification. Carbon capture and storage (CCS) techniques have been proposed and developed to contrast the rise of CO₂ in atmosphere. [...]

This Special Issue aims to collect articles covering various aspects of recent scientific advances of CO₂ storage, including characterization of storage formations and cap-rocks and their behavior during CO₂ injection, storage modelling studies for test design, test site results and environmental monitoring, numerical modelling of geochemical-mineralogical reactions and CO₂ flow, studies of natural analogs of CO₂ storage and CO₂ mineral sequestration, and experimental investigations to better understand long-term geological storage and carbonation processes.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (Mining and Mineral Processing) / CiteScore - Q1 (Geology)
