Industrial Minerals

Guest Editor:

Prof. Dr. Maite Garcia-Valles

Department of Mineralogy, Petrology and Applied Geology, University of Barcelona, Barcelona, Spain

Deadline for manuscript submissions: closed (15 September 2020)

Message from the Guest Editor

Industrial minerals include minerals and rocks that, depending on their physical and chemical properties, are used, directly or with treatment, in the manufacturing of products, such as ceramics, glass, cement, biomaterials, geopolymers, and even in the recycling of wastes. These can become raw materials in some industrial process and reduce the extraction of other materials and, therefore, contribute to the so-called environmental ecology.

Given the large volume of materials used, it is necessary to know from where they can be exploited, their mineralogy and properties, in order to determine the most suitable application in each case.

The thermodynamic behavior of industrial minerals is critically important at the time of being processed since it entails important economic repercussions. Well-controlled mineral dynamics (changes in compositions of phases, textures, etc.) during industrial processing is necessary to optimize the product. Moreover, in the case of reused wastes, an exhaustive control of the neoformed minerals and the position in the structure of the toxic elements must be controlled to ensure their stability.

Editor-in-Chief

Prof. Dr. Leonid Dubrovinsky Bayerisches Geoinstitut, University Bayreuth, D-95440 Bayreuth, Germany

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases. **Journal Rank:** JCR - Q2 (*Mining & Mineral Processing*) / CiteScore - Q2 (*Geology*)
