Message from the Guest Editors

Dear Colleagues,

The term asbestos derives from a Greek word meaning unquenchable. Today, the commercial term asbestos is applied to a group of six silicate minerals characterized by their fibrous structure and useful commercial properties. Over recent years, there has been increasing interest in natural occurrences of asbestos and asbestos containing materials as a source of possible environmental risk and negative health effects have been associated with exposure to this material. Today, asbestos and asbestos containing materials are considered hazardous waste, whose management has become a matter of great concern; however, the use of asbestos is not restricted or banned in all countries. This Special Issue, entitled *Asbestos Containing Materials*, concerns the latest findings on naturally occurring asbestos, as well as asbestos containing materials, in terms of their identification, characterization, and treatment from the point of view of waste management and recycling technologies, along with possible solutions for reducing asbestos exposure.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Mining & Mineral Processing*) / CiteScore - Q2 (*Geology*)
