### Message from the Guest Editors

Supramolecular gels represent one of the new frontiers of materials chemistry. Built by the feeble and cooperative supramolecular interactions occurring among low molecular weight compounds (gelators), they are featured in 3D-networks able to immobilize solvents through the occurrence of capillary forces.

This special issue is aimed at collecting contributions on studies on the obtaining of gel phases and their characterization, in the attempt to better clarify the relationship between gelator, solvent nature and gel phase formation. On the other hand, investigations of the plethora of supramolecular gels applications will also be taken into account. The main goal of the issue is to shed light on the ongoing research on this topic.

For the all description and further information see:

## Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Chemistry, Multidisciplinary*) / CiteScore - Q1 (*Chemistry (miscellaneous)*)
