Deadline for manuscript submissions: closed (20 May 2024)

Message from the Guest Editors

Nanocomposite films with high flexibility and other outstanding properties demonstrate great potential in a wide range of applications, such as sensors, capacitors, solar cells, electromagnetic shields, thermal interface materials, actuators, and medical electrodes, etc. However, developing such nanocomposite films still faces great challenges in terms of repeatability and reliability, as well as the balance between flexibility and multifunctionality. Therefore, there is great interest in the development of novel strategies for design and synthesis of flexible nanocomposite films with multi-functional properties which can expand their applications in various fields. This Special Issue of Nanomaterials will present the current state-of-the-art in the synthesis and applications of flexible films. Full nanocomposite research papers, communications, and reviews are all welcome.

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call "nanomaterials". These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metalorganic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, Nanomaterials, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (Physics, Applied) / CiteScore - Q1 (General Chemical Engineering)
