Deadline for manuscript submissions:
closed (31 May 2024)

Message from the Guest Editor

Dear Colleagues,

Luminescent crystalline dielectric nanoparticles doped with rare earth ions and nanodiamonds with color optical centers have been attracting attention as a new class of drugs combining properties for both diagnostic and therapeutic effects. One prospective research area is finding ways to significantly increase the luminescence efficiency of the rare-earth-doped nanoparticles will enable their actual application in bio-imaging. Another prospective research area is related to the ability of nanoparticles to locally heat bio-tissues under laser excitation, allowing the possibility of them being used as noninvasive high-precision thermal sensors at physiological temperature range. Last, but not least, an important problem to be solved in application is in elimination of the effects of agglomeration of single nanocrystals in aqueous colloidal solutions into aggregates.

The purpose of this special collection of papers is to introduce the reader to new approaches for the improvement of the physical, optical, and luminescent properties of crystalline nanoparticles. Both original papers and reviews are welcome.

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.
Journal Rank: JCR - Q2 (Physics, Applied) / CiteScore - Q1 (General Chemical Engineering)
