

Next Generation Networks and Systems Security

Guest Editors:

Dr. Konstantinos Limniotis

Department of Informatics and
Telecommunications, National
and Kapodistrian University of
Athens, Athens, Greece

**Prof. Dr. Nicholas
Kolokotronis**

Department of Informatics and
Telecommunications, University
of the Peloponnese, 221 31
Tripoli, Greece

Dr. Stavros Shiaeles

Cyber Security Research Group,
School of Computing University
of Portsmouth, Portsmouth PO1
2UP, UK

Deadline for manuscript
submissions:

31 July 2024

Message from the Guest Editors

This Special Issue aims to present new research, as well as to highlight the latest results and current challenges, with respect to next-generation networks and systems security and privacy. In a highly evolving environment, where different technologies such as IoT networks, blockchain technologies, 5G Networks, Wi-Fi networks, cloud computing, etc. are being interconnected and expanded, new threats for security and privacy are constantly appearing. To address them, advanced technologies such as artificial intelligence, machine learning and deep learning, big data analysis, post-quantum cryptography, and privacy-enhancing technologies seem to have a crucial role.

This Special Issue seeks original unpublished papers in this area, focusing on novel system architecture designs, new detection techniques, new results on cryptography, either theoretical or practical, as well as on experimental studies\technical reports. Hardware attacks and defenses are also within the scope of the issue. Review/survey papers, as well as papers focusing on addressing/analyzing relevant legal requirements on cybersecurity and privacy, from an engineering perspective, are also highly encouraged.
