Message from the Guest Editor

Dear Colleagues,

Vitamins are essential compounds involved in fundamental functions of the body. Vitamins differ in physiological functions and are broadly classified as water-soluble or fat-soluble. The purpose of this Special Issue, “Vitamins and Human Health,” is to provide cutting-edge original research and review articles regarding the diverse properties of various vitamins in disease and healthy living conditions. This Special Issue will discuss the potential role of vitamins on health and disease etiology, progression, treatment, and the recovery from injury and/or surgery. Articles eloquently discussing the various or new determinants of endogenous vitamin levels in disease and non-disease related conditions are encouraged. Submissions discussing the influence of a vitamin or vitamins on physical performance and survival are welcome.
