submissions:

**closed (25 May 2024)**

### Message from the Guest Editors

Dear Colleagues,

Vitamin D is an important steroid hormone for human health. There are many risk groups for vitamin D deficiency in the general population, specifically in patients with chronic diseases. In this Special Issue, we are looking for original reports, systematic reviews, meta-analyses, cost-effectiveness analyses, and even extraordinary case reports on the topic of vitamin D deficiency and supplementation in human metabolic diseases (including, but not limited to, prediabetes, metabolic syndrome, obesity, hypo- and hyperparathyroidism, and thyroid disease). We are also interested in effect size analyses, public health strategies, and fortification strategies across the globe and are looking forward to receiving high-quality submissions that will undergo a fair but strict review process.
