Deadline for manuscript  
submissions:

**25 July 2024**

### **Message from the Guest Editors**

Dear colleagues,

The genus *Clostridium* is a group of Gram-positive, spore-forming, and anaerobic bacteria. *Clostridium* inhabits a large spectrum of environments, such as soil, water, and the intestinal tracts of humans as well as animals. A diverse array of diseases, such as enteritis, gas gangrene, and tetanus, are induced by the members of exotoxin-producing *Clostridium*, such as *C. difficile*, *C. perfringens*, *C. botulinum*, *C. tetani*, *C. chauvoei*, *C. haemolyticum*, *C. novyi*, and *C. septicum*. Although an increasingly large body of studies has brought significant insights into the mechanisms of *Clostridium* diseases, much knowledge remains to be elucidated regarding the dynamic interactions between *Clostridium*, environments (microbiomes), and hosts at the levels of genomics, transcriptomics, proteomics, and metabolomics.

The goal of this Special Issue, entitled “*Clostridium* Pathogenesis: Virulence, Host Responses, Microbiome, and Interventions”, is to promote reports of advanced findings in the mechanisms and interventions of *Clostridium* diseases.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics. *Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*General Immunology and Microbiology*)
