### Message from the Guest Editor

Pharmacology is the study of the interactions between living organisms and chemicals that affect normal or abnormal biochemical functions. It integrates knowledge from multiple scientific disciplines, including chemistry, biochemistry, molecular biology, and physiology, and has a significant positive impact on human health. Through pharmacological research, we can identify new molecular targets, develop unique chemical and biological molecules, and explore their preclinical effects.

As Editor-in-Chief of the Section Pharmacology of Pharmaceuticals, I am pleased to invite you to submit high-quality manuscripts on research activities in pharmacology for this Special Issue entitled “The 20th Anniversary of Pharmaceuticals—Advances in Pharmacology”. Manuscripts focusing on pharmacodynamics, pharmacokinetics, toxicology, and all the different main fields of pharmacology are much welcomed.
