### Message from the Guest Editors

Dear Colleagues,

In the past decade, drugs have been developed to accommodate a wide range of small- (about 500 Da), medium-, and large-molecule candidates. Oral administration is the most convenient way for patients to take medications, and leads to high adherence. To determine the feasibility of developing a candidate as an oral drug, appropriate methods are required for predicting intestinal absorption. First, we focus on methods that use human intestinal tissue. Next, we introduce new findings on co-cultured models that use Caco-2 cells, and on in silico systems. These alternative in vitro methods are not only convenient for predicting intestinal drug absorption, but can also be used in a variety of research locations without strict controls, such as ethical and biosafety assessments. On the other hand, it is necessary to develop an oral absorption improvement technique that enables the intestinal absorption of medium- and large-molecule drugs; such technology should facilitate the development of these drugs. Therefore, we also introduce recent advances in nanocrystal systems.

## Message from the Editor-in-Chief

*Pharmaceutics* (ISSN 1999-4923) is an online open access journal on the science and technology of pharmaceutics and biopharmaceutics. The scientific community, the wider community and the general public have unlimited and free access to the content as soon as a paper is published; this open access to your research ensures your findings are shared with the widest possible audience. Please consider publishing your impressive work in this high quality journal. We would be pleased to welcome you as one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (*Pharmacology & Pharmacy*) / CiteScore - Q1 (*Pharmaceutical Science*)
