

## Organic and Hybrid Optoelectronic Materials and Devices

Guest Editors:

**Dr. Aung Ko Ko Kyaw**

Department of Electrical &  
Electronic Engineering, Southern  
University of Science and  
Technology, Shenzhen 518055,  
China

**Dr. Tao Ye**

School of Mechanical  
Engineering, Northwestern  
Polytechnical University, Xi'an  
710072, China

Deadline for manuscript  
submissions:

**closed (20 April 2024)**

### Message from the Guest Editors

This Special Issue aims to publish state-of-the-art unpublished works exploring the use of organic and hybrid materials in various optoelectronic devices. Topics will include, but are not limited to, novel organic and hybrid optoelectronic materials, new organic and hybrid optoelectronic nanostructures, detailed discussions about the interfaces within the organic and hybrid optoelectronic devices, advanced organic and hybrid optoelectronic device physics; nonclassical configurations of organic and hybrid optoelectronic devices, synthesis and/or self-assembly of hybrid halide perovskites and colloidal nanocrystals, thin films and single crystals of low-dimensional perovskites, and hybrid perovskite-related photoferroelectrics. Submissions on the molecular structures, synthesis methods, and physicochemical and optoelectronic properties of lead-free hybrid perovskites are also welcome.

- organic solar cell
- organic photodetector
- OLED
- perovskite solar cell
- perovskite laser
- perovskite photodetector
- perovskite LED
