Message from the Guest Editor

Dear Colleagues,

Plant diseases and insect pests can significantly impact the health and productivity of plants. Integrated Pest Management (IPM) is an approach to managing pests in agriculture, horticulture, and other plant-related industries. It is a series of comprehensive measures taken to protect plants from pests and diseases. This Special Issue aims to assess the current progress of IPM approach, and how to promote the plant growth by effectively controlling pests and diseases to minimize the harm to the environment. The scope of this Special Issue includes, but is not limited to, cultivation practices, plant defense responses, pest monitoring, biological control techniques, chemical controls, and so on. We would like to invite all scholars who study IPM and plant health to contribute to this Special Issue. Original research and comments are welcome.

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Plant Sciences*) / CiteScore - Q1 (*Plant Science*)
