The Bioactivity of Natural Products and Extracts from Horticultural Plants

Guest Editor:

Dr. Filomena Monica Vella

National Research Council (CNR), Institute of Biosciences and BioResources (IBBR), Via P. Castellino, 80131 Naples, Italy

Deadline for manuscript submissions: closed (31 October 2024)

Message from the Guest Editor

Horticultural plants can be found all around the world and, among them, fruit and vegetables are regarded as the most important sources of nutrients and health-promoting compounds for human health. In particular, horticultural elements (seeds, skins, rinds, pulps, roots, leaves, kernels, stems, and flowers) are excellent sources of pigments, phenolic compounds, flavonoids, carotenoids, terpenes, flavouring agents, aromas, essential oils, and iridoids. All these natural products are characterized by their valuable biological properties, such as antibacterial, antimicrobial, antioxidant, anti-inflammatory, antiviral, antitumor, and antimutagenic activities.

The screening of horticultural plants for novel biologically active metabolites is an important research topic because these high-value-added biomolecules can be employed for the development of functional or enriched foods in the food and beverage industry, as well for cosmetic, pharmaceutical, and textile applications.

This Special Issue aims to collect reviews and original papers on natural bioactive compounds from horticultural plants, related biological activities, and potential applications.

Editor-in-Chief

Prof. Dr. Dilantha Fernando Department of Plant Science, University of Manitoba, Winnipeg, MB R3T 2N2. Canada

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
