Dr. Fiore Capozzi

Department of Biology, Università degli Studi di Napoli Federico II, 80126 Napoli, Italy

Prof. Dr. Luis Gómez

Centre for Plant Biotechnology and Genomics (CBGP UPM-INIA), Campus de Montegancedo, Universidad Politécnica de Madrid, 28223 Madrid, Spain

Deadline for manuscript submissions: closed (31 May 2022) Dear Colleagues,

Message from the Guest Editors

Environmental contamination by pollutants is a complex and pressing problem deeply felt at a global scale. Heavy metals, organic pollutants, microplastics, and other xenobiotics can accumulate in living organisms along the food chain, posing a serious risk at the top trophic levels, including humans. Therefore, the monitoring and cleaningup of pollutants in the environmental compartment represent crucial ways to minimize the hazard to ecosystems. To date, many physical, chemical, and biological approaches have been used to cope with this problem, with differing outcomes. The use of plants and associated soil microbes to restore polluted soils or absorb/adsorb pollutants from water bodies or the atmosphere could be an effective and green method for both biomonitoring and environmental restoration. The aim of this Special Issue is to present a collection of original studies focused on the capacity of plants to absorb/adsorb xenobiotics from the environment, particularly emerging pollutants.

Prof. Dr. Dilantha Fernando

Department of Plant Science, University of Manitoba, Winnipeg, MB R3T 2N2, Canada

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Plant Science)
