Potential of Neglected and Underutilized Plant Species as Future Crops under Climate Change

Guest Editors:

Prof. Dr. Șumălan Radu-Liviu

Prof. Dr. Stănică Florin

Prof. Dr. Ciulca Sorin

Deadline for manuscript
submissions:

31 May 2024

Message from the Guest Editors

Finding new, valuable food sources rich in active compounds is essential in the context of climate pressure, and neglected and underutilized species (NUS) are a viable alternative. These are cultivated, semi-domesticated or wild plant species that tend to be underutilized regionally and globally due to low market interest.

Through this Special Issue, we aim to bring to highlight the importance of NUS to the scientific community in the current climate context, encouraging researchers to present the results obtained through review articles, short communications and original research papers.

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Plant Sciences*) / CiteScore - Q1 (*Plant Science*)
