Deadline for manuscript  
submissions:

**closed (30 April 2017)**

### Message from the Guest Editor

Dear Colleagues,

The plant cuticle is the interface between the organism and its environment. As such, it plays key roles a wide range of interactions with the environment, both abiotic and biotic. It is a hydrophobic surface, composed of both monomeric constituents, the very long-chain fatty acid derivatives known as waxes, and the complex polyester, cutin. In the last ten years, our understanding of the biosynthesis of these lipids and their assembly on the cell surface has expanded rapidly. This Special Issue of *Plants* will focus on recent developments in the understanding of the biology of the plant cuticle.

Dr. David Bird

## Message from the Editor-in-Chief

*Plants* is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [PubAg](#), [AGRIS](#), [CAPlus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
