

Geophysical Applications of GOCE and GRACE Measurements

Guest Editors:

Prof. Dr. Mehdi Eshagh

Department of Applied
Geomatics, University of
Sherbrooke, Sherbrooke, QC,
Canada

Dr. Carla Braitenberg

Dipartimento di Matematica e
Geoscienze, Università degli
Studi di Trieste, Trieste, Italy

Dr. Mirko Reguzzoni

Geodesy and Geomatics Division,
Department of Civil and
Environmental Engineering,
Politecnico di Milano, 20133
Milan, Italy

Deadline for manuscript
submissions:

closed (30 July 2024)

Message from the Guest Editors

Dear Colleagues,

The Gravity field and steady-state Ocean Circulation Explorer (GOCE) was the first satellite gravity gradiometry mission for precise and high-resolution gravity field modelling. GOCE was planned for a lifetime of two years but lived longer and provided valuable information about the Earth's gravity field. Its data have been successfully used for different purposes in Oceanography, solid Earth Geophysics and Geodesy. New theories and applications can still be further developed to extract more information about our planet from this valuable source of data. This Special Issue is organised with the main purpose of promoting geophysical applications of the GOCE data, being published to celebrate 10 years of the end of the GOCE mission (2009–2013). Papers focusing on applications in Oceanography, Geology, and Geodesy are also welcome to this Special Issue.

- Global and local gravity field modelling
- Determination of crustal structure, Moho depth and density contrast
- Elastic thickness modelling
- Ice and sediment thickness
- Lithospheric stress and thermal state
- Oceanographic applications
- Geodetic applications

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank: JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
