

Drones for Precision Agriculture: Remote Sensing Applications

Guest Editors:

Prof. Dr. Javier J Cancela

GI-1716, Projects and
Planification, Dpto. Ingeniería
Agroforestal, Universidad de
Santiago de Compostela, Escola
Politécnica Superior de
Enxeñaría, Rúa Benigno Ledo s/n,
27002 Lugo, Spain

Dr. Rocío Ballesteros González

Crop Production and Agricultural
Technology Department, Higher
Agricultural and Forestry
Engineering School, University of
Castilla-La Mancha, Campus
Universitario s/n, 02051 Albacete,
Spain

Deadline for manuscript
submissions:

closed (30 September 2021)

Message from the Guest Editors

It is very well known that world population will reach 9100 million by 2050. Therefore, food security should be considered as one of the main targets following the 2030 Sustainable Development Goals. Further, it is not possible to speak about global population increase without considering global warming future scenarios. Precision agriculture should be considered a useful tool to face all these global challenges. Unmanned aerial vehicles have evolved rapidly in the last decade, where different sensors improve sustainable crop production for multiple aspects/applications such as: 3-D maps for soil analysis; Mid-season crop health monitoring; Irrigation equipment monitoring; Pesticide spraying; Increase the yield and quality; Wildlife detection.

Basic research studies applied to precision agriculture, in any of the subjects presented are well received—especially those studies that address data analysis techniques, ‘exportable’ to other applications and crops, facing an ‘open science’. Successful experiences of application of the use of drones in agriculture (woody crops, horticulture etc.) based on results of a long-time scale are also expected.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank: JCR - Q1 (*Geosciences, Multidisciplinary*) / CiteScore - Q1 (*General Earth and Planetary Sciences*)
