The design and development of molecular imaging probes are related to the novel biomarkers that will help and improve the early diagnosis and staging of several deadly diseases, including cancer. Significantly, the sensor or responsive units that selectively recognize the molecule of interest in deep tissue incorporated imaging probes often provide invaluable information about the disease progression and stages.

Therefore, this Special Issue is addressed in the design, development, and applications of sensors or responsive unit(s)-incorporated molecular imaging probes.

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

Open Access : free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases. **Journal Rank:** JCR - Q2 (*Instruments & Instrumentation*) / CiteScore - Q1 (*Instrumentation*)
