Trends and Prospects on Nonlinear Optics with Symmetry/Asymmetry

Guest Editor:

Prof. Dr. Yandong Peng

Qingdao Key Laboratory of Terahertz Technology, College of Electronic and Information Engineering, Shandong University of Science and Technology, Qingdao 266590, China

Deadline for manuscript submissions: **31 October 2024**

Message from the Guest Editor

The field of nonlinear optics investigates the behavior of light-matter interactions under intense light conditions, enabling a deeper understanding of the fundamental principles governing nonlinear optical phenomena. Two distinct approaches in nonlinear optics research are asymmetric and symmetric studies, which provide valuable insights into the complex nature of these interactions.

Both asymmetric and symmetric studies on nonlinear optics contribute to our collective knowledge by providing a comprehensive understanding of the underlying principles and mechanisms governing light-matter interactions. These studies pave the way for the development of advanced optical devices, novel material platforms, and cutting-edge applications in fields such as telecommunications, biophotonics, and quantum information processing.

Editor-in-Chief

Prof. Dr. Sergei D. Odintsov

 Institució Catalana de Recerca i Estudis Avançats (ICREA), Passeig Luis Companys, 23, 08010 Barcelona, Spain
Institute of Space Sciences (ICE-CSIC), C. Can Magrans s/n, 08193 Barcelona, Spain

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q2 (*Multidisciplinary Sciences*) / CiteScore - Q1 (*General Mathematics*); Q1 (*Physics and Astronomy*); Q1 (*Computer Science*)
