Message from the Guest Editors

Inequalities persist in the coverage of immunization globally and across the life course. Evidence has revealed gaps or gradients in childhood and adult immunization within and across countries, and with respect to dimensions of inequality such as sex, gender, socio-economic status, place of residence and more. Yet, our understandings of patterns of inequalities in immunization remain incomplete. The year 2024 marks 50 years of the Expanded Programme on Immunization (EPI). The EPI has galvanized national and global collaboration and helped set up essential infrastructure and standardized processes to universalize access to immunization. In this Special Issue, we place emphasis on research and review articles that deepen our understanding of immunization inequalities as well as highlight entry points or modalities to reduce them. We encourage submissions that apply rigorous and innovative methodological approaches, including multilevel modeling, compound and/or intersectional vulnerabilities or disadvantages, and geospatial approaches, as well as statistical and computational innovations in understanding and summarizing inequalities in immunization.

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.**

Journal Rank: JCR - Q1 (Immunology) / CiteScore - Q1 (Pharmacology (medical))
