Message from the Guest Editors

Dear Colleagues,

This special issue will overview the mechanisms by which viral envelope glycoproteins are acquired by different viruses in order to generate infectious viral particles. It will highlight both the common and divergent strategies evolved by viruses that facilitate the translocation of the viral transmembrane glycoproteins to the viral assembly sites. All enveloped viruses are considered. We shall explore how the varied life cycles of different enveloped viruses results in different mechanisms for glycoprotein acquisition. Cellular factors that modulate the viral glycoprotein expression, trafficking, and incorporation are also included.

Message from the Editor-in-Chief

Viruses (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus**, **SCIE (Web of Science)**, **PubMed**, **MEDLINE**, **PMC**, **Embase**, **PubAg**, **AGRIS**, and **other databases**.

Journal Rank: JCR - Q2 (*Virology*) / CiteScore - Q1 (*Infectious Diseases*)
