Environment, Huazhong  
Agricultural University, Wuhan,  
China

**Dr. Zhengchao Tian**

College of Resources &  
Environment, Huazhong  
Agricultural University, Wuhan,  
China

Deadline for manuscript  
submissions:

**31 July 2024**

### Message from the Guest Editors

Soil and water erosion monitoring and control have witnessed significant advancements over time. The continuous efforts in understanding and mitigating the impacts of erosion on the environment and agricultural lands have led to the development of sophisticated monitoring and control strategies. The evolved monitoring techniques entail the integration of remote sensing technologies, geographical information systems (GIS), and advanced modeling tools. These advancements allow for the real-time assessment of erosion-prone areas, helping in the identification of vulnerable regions. In terms of control measures, the traditional practices have been complemented with innovative strategies. Conservation tillage, contour plowing, and cover cropping remain the fundamental methods, but modern interventions include the use of erosion-control blankets, bioengineering solutions, and sustainable land management practices. These contemporary approaches aim not only to prevent erosion but also to enhance soil fertility and biodiversity. Additionally, the integration of data-driven decision-making processes has become crucial.

## Editor-in-Chief

### Dr. Jean-Luc PROBST

Laboratory of Functional Ecology  
and Environment, Centre  
National de la Recherche  
Scientifique (CNRS), University of  
Toulouse, Campus ENSAT,  
Auzeville Tolosane, France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
