## Drought Risk Assessment and Human Vulnerability in the 21st Century

Guest Editors:

**Dr. João Filipe Santos**

Civil and Environmental  
Engineering, Polytechnic  
Institute of Beja, 7800-309 Beja,  
Portugal

**Dr. Nelson Carriço**

Civil Engineering, Polytechnic  
Institute of Setubal, Barreiro  
School of Technology, 2839-001  
Lavradio, Portugal

Deadline for manuscript  
submissions:

**15 July 2024**

### Message from the Guest Editors

It is known that climate change will reinforce drought conditions over many regions of the world, necessitating strengthened human resilience.

An integrated drought risk assessment takes into account not only climate-induced changes but also changes occurring due to the exposure and vulnerability of communities and environmental systems to droughts events. To build upon humanity's climate resilience, we must reduce our exposure and vulnerability to droughts as well as other economic, social and environmental shocks and disasters, which presents a substantial challenge, particularly for populations living in countries with a low level of human development.

As observed by the Intergovernmental Panel on Climate Change (IPCC), plausible climate and socioeconomic development pathways (SSPs) have allowed for the formulation of important scenarios in the assessment of future drought risks at local and global scales through the incorporation of population growth, socioeconomic human development[...]

## Editor-in-Chief

### **Dr. Jean-Luc PROBST**

Laboratory of Functional Ecology  
and Environment, Centre  
National de la Recherche  
Scientifique (CNRS), University of  
Toulouse, Campus ENSAT,  
Auzeville Tolosane, France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
