Water Treatment with New Nanomaterials

Guest Editor:

Dr. Shahin Homaeigohar

Nanochemistry and
Nanoengineering, School of
Chemical Engineering, Aalto
University, Department of
Chemistry & Materials Science,
Kemistintie 1, C321, 00076 Aalto,
Finland

Deadline for manuscript
submissions:

closed (31 March 2020)

Message from the Guest Editor

While water shortage across the world is threatening, emerging advanced technologies to address this challenge are promising. In this regard, nanomaterials have played a crucial role and offered new opportunities for the construction of permeable and selective membranes and adsorbents. Such features are paramount, particularly given the limited available energy resources. In this issue, we aim to cover new researches dealing with water treatment based on nanomaterials of polymer, composite, ceramic, carbon, etc., that could be shaped in any dimensionality such as particle (0D), fiber (1D), and film (2D-3D). A particular emphasis will be given to nanofibrous adsorbents and membranes, as well as graphene membranes for desalination.

Special Issue

water

an Open Access Journal by MDPI

Editor-in-Chief

Dr. Jean-Luc PROBST

Laboratory of Functional Ecology
and Environment, Centre
National de la Recherche
Scientifique (CNRS), University of
Toulouse, Campus ENSAT,
Auzeville Tolosane, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
