# Multiplicity, Characteristics, Main Impacts, and Stewardship of Natural and Artificial Freshwater Environments: Consequences for Biodiversity Conservation

Guest Editors:

Dr. Marco Cantonati

Dr. Sandra Poikane

Prof. Dr. Catherine M. Pringle

Dr. Lawrence E. Stevens

Dr. Eren Turak

Deadline for manuscript submissions:

closed (22 November 2019)

# **Message from the Guest Editors**

Dear Colleagues,

The rationale of this Special Issue is to collect papers that discuss the potential of the different natural and artificial freshwater habitat types to contribute to freshwater biodiversity conservation. We are especially seeking articles that illustrate the potential of near-natural and man-made freshwater habitats (focus can be narrowed on ecolgical categories, e.g., phytobenthos- or taxocoenoses, etc.) for biodiversity conservation by examining their ecological characteristics, conservation status, and main impacts affecting them. The following topics are alredy planned to be included in the Special Issue: Potential and value of springs, natural and artificial lakes affected by marked water-level fluctuations, large ancient lakes, mires, mountain and high-mountain lakes, streams and rivers for freshwater biodiversity conservation; springs (as compared to streams) as refugial habitat for sensitive species (Least-Impaired Habitat Relicts—LIHRe concept); can freshwaterbiodiversity inventoring be funded independently from assessment and monitoring efforts?

## **Message from the Editor-in-Chief**

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. Water invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to technological scientific domains and interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

#### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
