Volos, Greece

Deadline for manuscript
submissions:

closed (30 June 2022)

Message from the Guest Editors

As water operators around the Globe fearfully witness the undoubtable climate change severe impacts on both the quality and the quantity of the water resource reserves available, they have to act now before it is too late, not only to slow down (or even to reverse) these impacts but also to restore the harmed water balance. They must adequately and persuasively answer to several dilemmas, cope with contradicting challenges, and face emerging threats towards their ultimate goal that is to safeguard the provision of water of good quality and adequate quantity today. The scientific community has to offer new ideas that will go far beyond the theoretical approach and prove to be applicable in practice. The drawbacks resulting from the fact that the global economic environment is too fragile and wounded due to the pandemic should also be considered. Any proposed action needs to now more than ever be self-sustained and self-financed if possible.

Special Issue

water

an Open Access Journal by MDPI

Editor-in-Chief

Dr. Jean-Luc PROBST

Laboratory of Functional Ecology
and Environment, Centre
National de la Recherche
Scientifique (CNRS), University of
Toulouse, Campus ENSAT,
Auzeville Tolosane, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
