

## Supplementary Materials

# A hadal *Streptomyces*-derived echinocandin acylase discovered through prioritization of protein families

Xuejian Jiang<sup>1</sup>, Hongjun Shu<sup>1</sup>, Shuting Feng<sup>1</sup>, Pinmei Wang<sup>1,2</sup>, Zhizhen Zhang<sup>1</sup> and Nan Wang<sup>1,2,\*</sup>

### Table of Contents

<b>Table S1.</b> Marine derived proteins clustered with the probe FR9013179 acylase in SNN generated by EFI-EST .....	3
<b>Table S2.</b> Strains and plasmids used in this study.....	3
<b>Table S3.</b> Primers used in this study.....	4
<b>Table S4.</b> DNA fragments for assembling the <i>ecea</i> expressing cassette .....	4
<b>Table S5.</b> Amino acid sequence of ECEA including the signal peptide.....	5
<b>Figure S1.</b> HPLC profiles showing the deacylation activity of ECE and FR901379 by the hadal bacterium <i>Streptomyces</i> sp. SY1965 (a, c) and the recombinant echinocandin E acylase (ECEA) overproducing strain (TKecea66)(b, d). .....	7
<b>Figure S2.</b> High-resolution mass spectra showing the production of deacylated products of ECEN and FR179642 from substrates ECE and FR901379, respectively. ....	8
<b>Figure S3.</b> Construction of the <i>ecea</i> gene overexpression plasmid for intergeneric conjugation. The DNA fragment (2415 bp) amplified from the genomic DNA of <i>Streptomyces</i> sp. SY1965 (a); PCR verification of recombinant plasmid pSET- <i>kasOp</i> <sup>*</sup> ECEA (b). M: DNA Marker; left gel: lanes 1-9 are <i>E. coli</i> /DH5α transformants; Lane 9 represents the correct construct. ....	9
<b>Figure S4.</b> Plasmid map of pSET- <i>kasOp</i> <sup>*</sup> ECEA. The <i>ecea</i> gene expression cassette consists of the <i>KasOp</i> <sup>*</sup> (with RBS) promoter, structure gene of <i>ecea</i> , 6×His tag and the Lambda T0 terminator. ....	10
<b>Figure S5.</b> Schematic diagram showing the integration site of the <i>ecea</i> gene and	

PCR verification of the expression cassette on the chromosome of the recombinant strain, *Streptomyces lividans* TKecea66.....10

**Figure S6.** PCR verification of the genotype of *S. lividans* TKecea66. Agarose (1%)/TAE gel electrophoresis showing the upstream (**a**) and downstream (**b**) junctions flanking the *eceA* gene. M: DNA Marker; lines 1-8: exconjugants; line 9: *S. lividans* TK24; line 10: exconjugant with empty plasmid.....11

**Figure S7.** SDS-PAGE analysis of the ECEA produced by the recombinant strain *Streptomyces lividans* TKecea66. M: Marker; Lane 1: supernatant of *S. lividans* TK24; lane 2: supernatant of TKecea66; lane 3: *S. lividans* TK24 transferred with an empty pSET152 vector; lane 4: fractions eluted with buffer containing 20 mM imidazole; Lane 5: fractions eluted with buffer containing 50 mM imidazole; line 6: fractions eluted with buffer containing 100 mM imidazole; line 7: fractions eluted with buffer containing 300 mM imidazole; line 8: fractions eluted with buffer containing 500 mM imidazole.....11

**Figure S8.** Multiple sequence alignment of ECEA, hypothetical ECE acylases (blue), known proteins (red) and a cephalosporin C acyltransferase (CAD, GenBank accession number: AF251710.1, green). Key catalytic sites marked with red stars and active pocket residues marked with triangles. echinocandin B acylase gene (GenBank accession numbers: BD226911, AB158476.1, HM851181, D10610). ...12

**Figure S9.** Comparison of the structures of ECEA (green) and CPC (orange, PDB code: 1JVZ), RMSD= 2.469. ECEA was generated by Alphafold2. ....13

**Figure S10.** The structure (a) of ECE and CPC protein docking that  $\alpha$ -subunit colored by light blue and  $\beta$ -subunit colored by light pink, and shown the key residues (cyan) surrounding substrate of ECE (yellow) within 6 Å (b). ....13
