Balance of Anthropogenic and Natural Greenhouse Gas Fluxes of All Inland Ecosystems of the Russian Federation and the Contribution of Sequestration in Forests

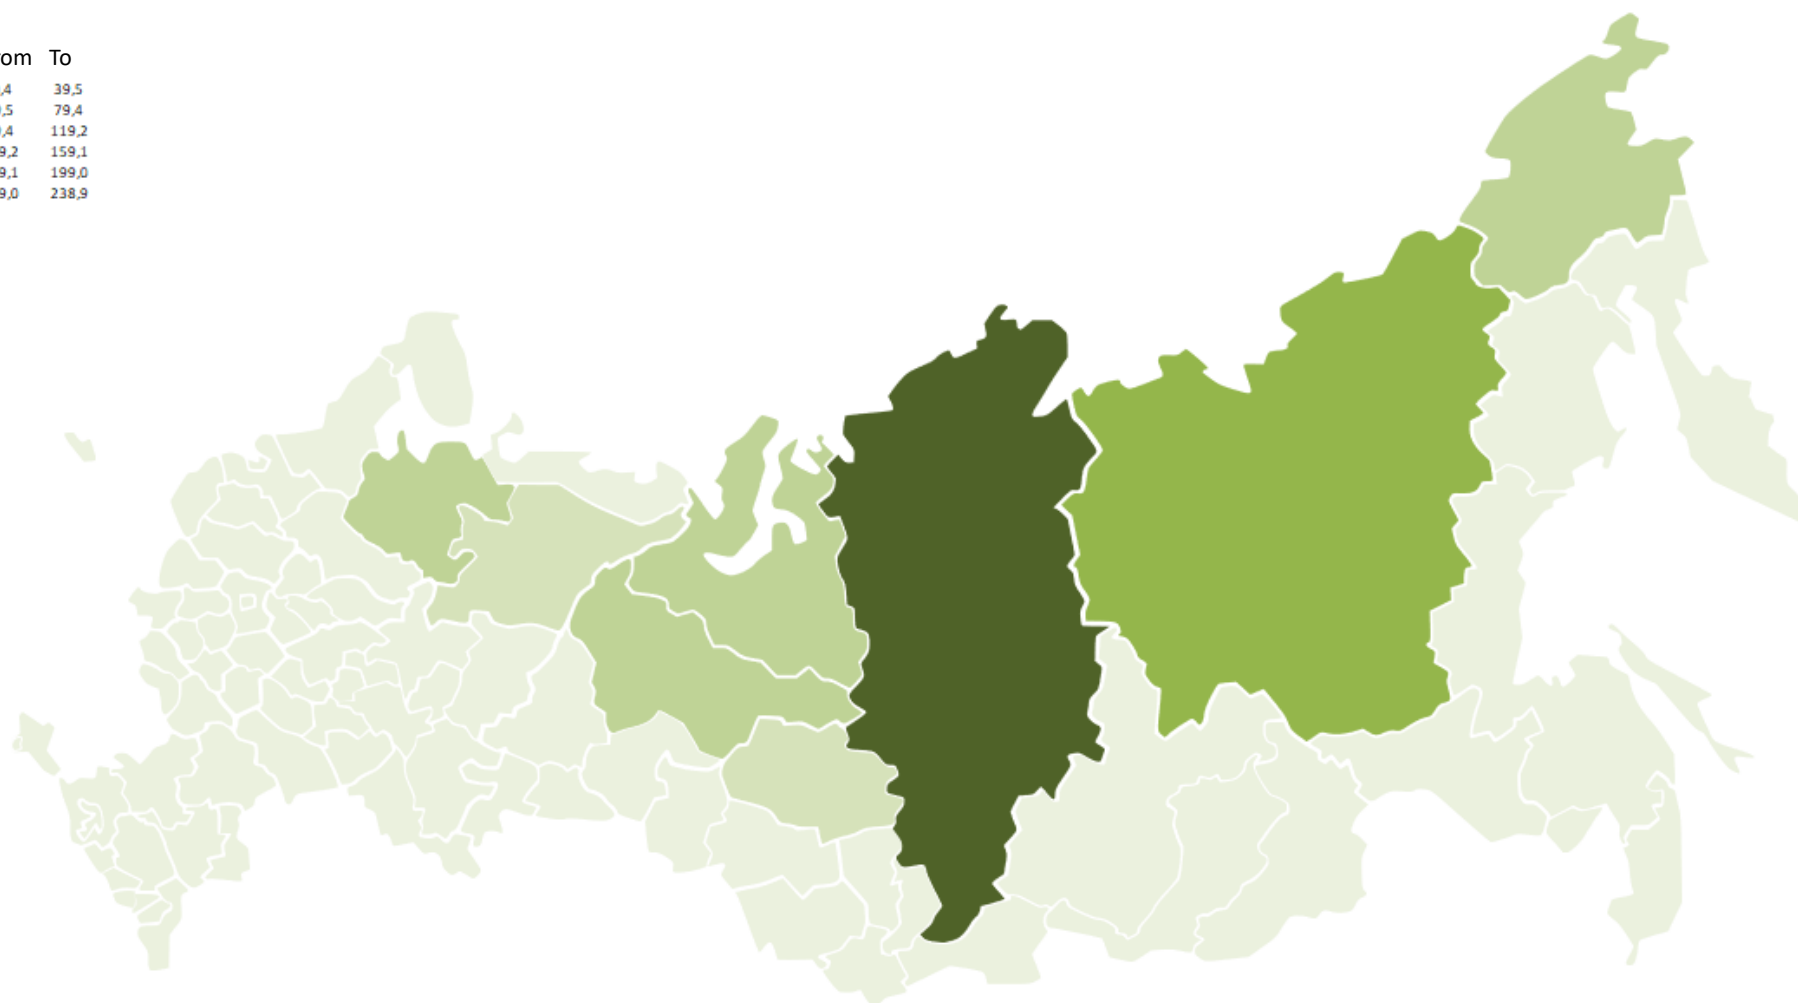

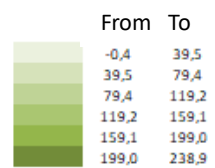

Anna Romanovskaya, Vladimir Korotkov

Figure S1. Net GHG fluxes from ecosystems by types of gases and by Russian territorial subjects, million tons of CO₂-eq. per year (negative values are absorption, positive values are emissions) (according to Korotkov et al. [1]): (a) CO₂; (b) CH₄; (c) N₂O; (d) all GHGs.
