

Figure S1. The diameter of rosettes. The 5-d-old wild-type plants were transferred onto half-strength MS agar medium with or without 500 nM peptide. Take photos of transferred seedlings daily and measure the diameter of rosettes on day 0 and day 4 after transferred using Image J. The experiment was repeated twice, with 20 seedlings transferred for each treatment in each repetition. "ns" indicated no significant difference, "*" and "****" indicated a significant difference at $p < 0.05$ and $p < 0.0001$ level, respectively.
