

## SUPPLEMENTAL MATERIAL

**Supplemental Figure 1.**

Footshock avoidance of dTau KO flies is elevated compared to their isogenic controls *w<sup>1118</sup>* reported as the mean Avoidance Fraction ( $\pm$  SEM), defined as the fraction of naïve flies that avoid the maze arm with an electrified grid at 45V DC and chose the opposing arm. The pooled data from all habituation experiments involving simultaneously untreated animals of both genotypes were used (n = 56 for both genotypes). The difference is statistically significant, ANOVA:  $F_{(1,110)} = 19.3701$ ,  $p < 0.0001$ .
