Content.

Table S1. Results of the Adonis analysis on the beta diversity distance matrix. Parameter indicates the parameter or combination of parameters tested, F.model is the test's statistic, R2 is the fraction of variance explained by the parameter and Pr(>F) is the q-value, or FDR (false discovery rate) adjusted p-value. Rejection threshold was set at 0.05. NaN: not available.

2

Table S2. Significance groups for the results of the pairwise PERMANOVA (Permutational Analysis of Variance) and PERMDISP (Permutational Dispersion Analysis) on the beta diversity distance matrix for all tissue/treatment/sampling timepoint combinations. Rejection threshold for the presence of significant differences was set at 0.05.

3

Table S3. Results of the pairwise PERMANOVA (Permutational Analysis of Variance) and PERMDISP (Permutational Dispersion Analysis) on the beta diversity distance matrix for all tissue/treatment/sampling timepoint combinations. Pseudo-F and F-value are the PERMANOVA's and PERMDISP's statistics, respectively. Q-value is the FDR (false discovery rate) adjusted p-value.

4

Table S1. Results of the Adonis analysis on the beta diversity distance matrix. Parameter indicates the parameter or combination of parameters tested, F.model is the test's statistic, R2 is the fraction of variance explained by the parameter and Pr(>F) is the q-value, or FDR (false discovery rate) adjusted p-value. Rejection threshold was set at 0.05. NaN: not available.

Parameter	F.model	R2	Pr(>F)
Tissue	86.62	0.44	0.001
Treatment	10.34	0.11	0.001
Sampling timepoint	3.48	0.04	0.007
Tissue x Treatment	9.27	0.09	0.001
Tissue x Sampling timepoint	4.30	0.04	0.003
Treatment x Sampling timepoint	3.53	0.04	0.01
Tissue x Treatment x Sampling timepoint	0.06	<0.01	0.993
Residuals	0.65	0.24	NaN
Total	NaN	1	NaN

Table S2. Significance groups for the results of the pairwise PERMANOVA (Permutational Analysis of Variance) and PERMDISP (Permutational Dispersion Analysis) on the beta diversity distance matrix for all tissue/treatment/sampling timepoint combinations. Rejection threshold for the presence of significant differences was set at 0.05.
