Figure S1. Linear isotherm analysis plots of thermally synthesised magnetic polymers	S-2
Figure S2. Gas chromatography-mass spectrometry selected ion monitoring chromatograms of white wines	S-3

Figure S1. Linear isotherm analysis plots of thermally synthesised magnetic polymers showing (a) Langmuir Type 2 analysis plot of putative magnetic molecularly imprinted polymer (MMIP), (b) Langmuir Type 2 analysis plot of magnetic non-imprinted polymer (MNIP), (c) Freundlich analysis plot of putative MMIP, (d) Freundlich analysis plot of MNIP, (e) Dubinin-Radushkevich analysis plot of putative MMIP, and (f) Dubinin-Radushkevich analysis plot of MNIP. Q: equilibrium adsorption amount (pmol/g); Cf: final equilibrium concentration of 3-isobutyl-2-methoxypyrazine (IBMP) (ng/L); ϵ : polanyi potential.

Figure S2. Gas chromatography-mass spectrometry selected ion monitoring chromatograms of white wines showing (a) spiked Australian Sauvignon Blanc, (b) spiked Australian Sauvignon Blanc after putative MMIP treatment, (c) spiked New Zealand Sauvignon Blanc, and (d) spiked New Zealand Sauvignon Blanc after putative MMIP treatment. IBMP was quantified using $m/z = 124$ with d_3 -IBMP at $m/z = 127$ as the labelled internal standard.
