<sup>a</sup> Frequencies in cm<sup>-1</sup>. Symbols represent; v, stretching;  $\beta$ , bending; w, out-of-plane deformations (wags); t, torsional deformations; r, rocking,  $\delta$ , methyl group deformations, and tw twisting modes. The potential energy contribution is listed as a percentage in parentheses. Only internal coordinate contributing more than 10% to the potential energy distribution are reported.

**Figure S1.** Adiabatic torsional potential energy surface of DMA for the (a) O<sub>2A</sub>-As-O<sub>SA</sub>-C<sub>T3</sub>, (b) O<sub>SA</sub>-As-O<sub>SA</sub>-C<sub>T3</sub> and (c) As-O<sub>SA</sub>-C<sub>T3</sub>-H<sub>A</sub> the black solid line was the HF/6-31G \* results. The red dash line was the empirical results which fitted to the HF/6-31G \* results.
