

Efficient generation of genome-modified mice using *Campylobacter jejuni*-derived CRISPR/Cas

Wataru Fujii, Arisa Ikeda, Koji Sugiura, Kunihiko Naito

Supplementary Information

Supplementary Figure 1	Sequences of Cj-Cas9 and gRNAs.
Supplementary Figure 2	Confirmation of Cj-Cas9 expression by immunoblotting.
Supplementary Figure 3	Schematics of target loci of each gRNAs.
Supplementary Table 1	Primer sets for synthesis of Cj-gRNA template vectors and ssODN.
Supplementary Table 2	Primer sets for genomic PCR.
Supplementary Table 3	On-target and off-target loci of <i>Tyrosinase</i> .

Supplementary Figure 1. Sequences of Cj-Cas9 and gRNAs.

>DNA sequence of Cj-Cas9 vector (from T3 promoter to SphI site)

Supplementary Figure 2. Confirmation of Cj-Cas9 expression by immunoblotting.

A band with expectative molecular weight (about 118 kD) of Cas9 protein was observed in HEK293 cells. Beta-actin (ACTB) was shown as loading control.

Supplementary Figure 3. Schematics of target loci of each gRNAs.

(A) The gRNAs designed in Tyrosinase locus (Chr7: 87492422 to 87493521 in GRCm38.p4). (B) The gRNAs designed in Rosa26 locus (Chr6: 113075796 to 113076364 in GRCm38.p4). Each arrow indicates the target of gRNAs shown in Table 1 and Supplementary Figure 1. The direction of arrow means the 5' to 3' of gRNA recognition sequence. (C) Target sequences of each gRNAs and the developmental competencies of the microinjected embryos.

Supplementary Table 1. Primer sets for synthesis of Cj-gRNA template vectors and ssODN for Chk2-Flag knock-in.

Target	Sequences
Fw primer for platform gRNA	5'-GAAATTAACCCTCACTAAAGGAGAGACGATCGTCTCTGTTTTAGTCCCTGAAAAGGGACTAAAATAAAGA-3'
