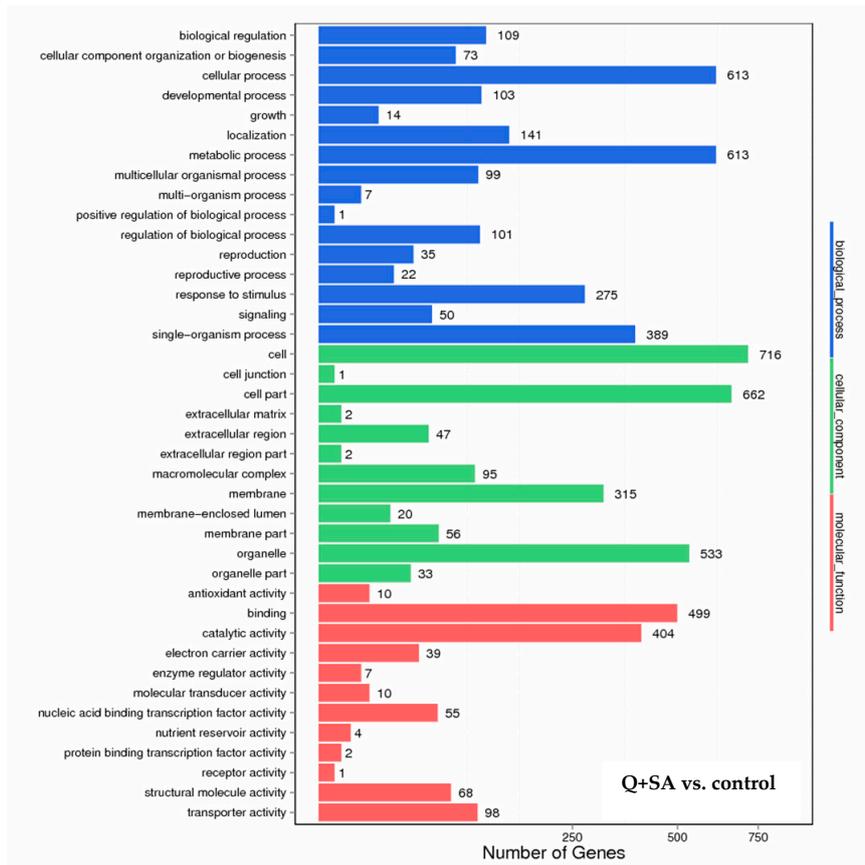

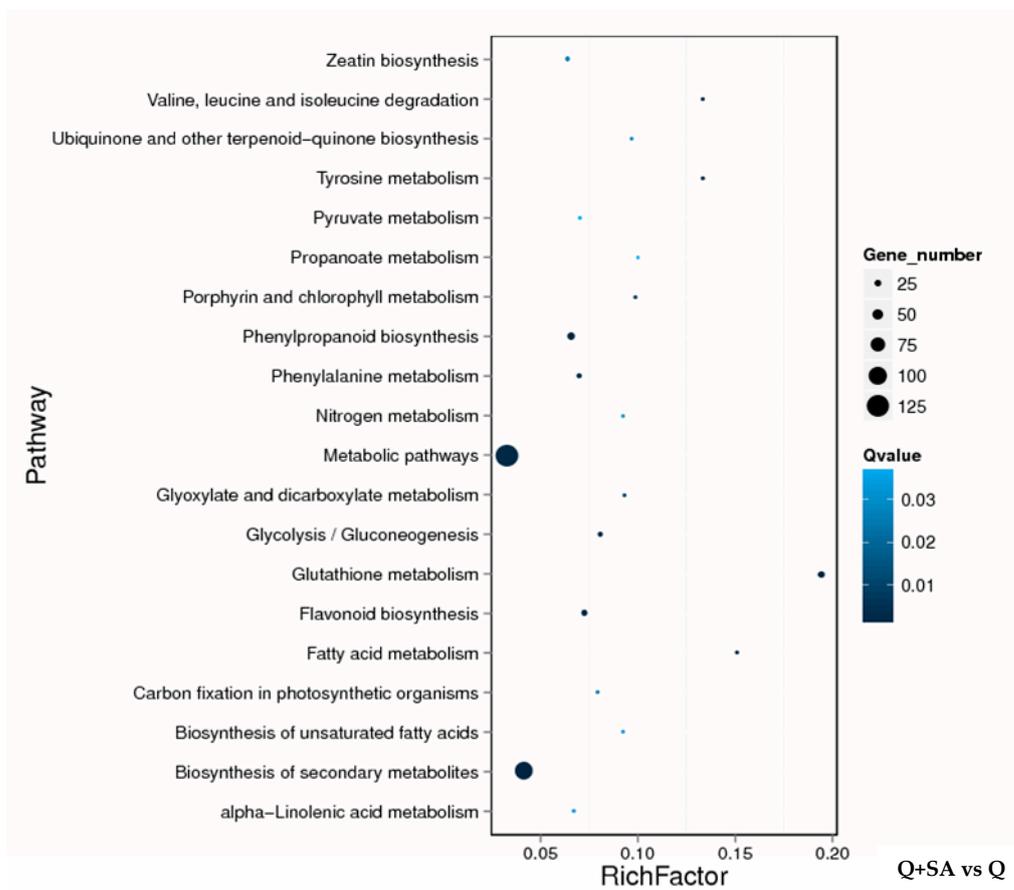

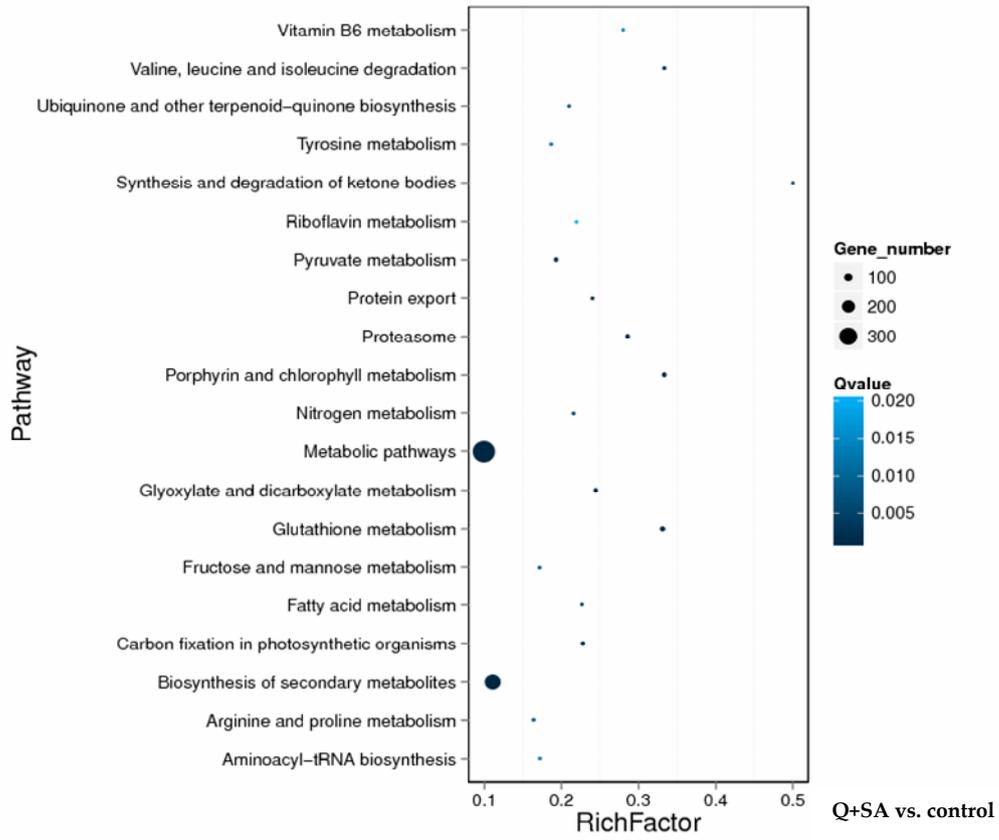

Figure S1. GO functional classification on DEGs for each pairwise. All GO terms are grouped in to three ontologies: blue is for biological process, brown is for cellular component and orange is for molecular function.

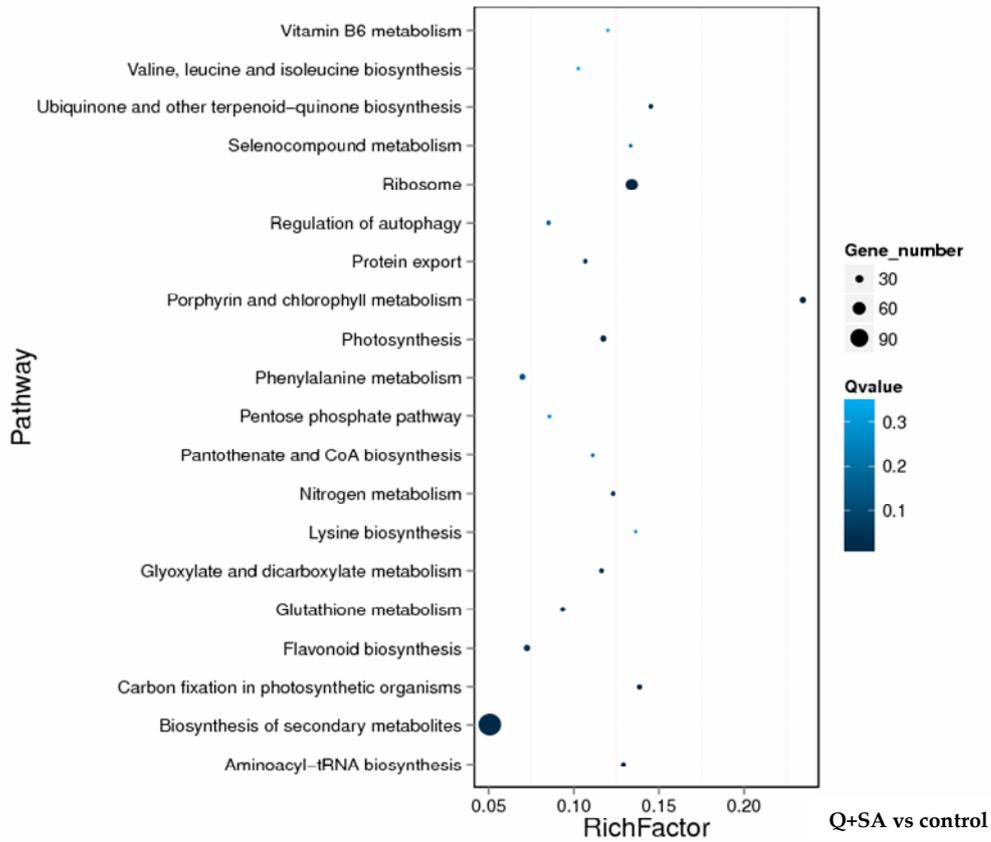

Figure S2. Statistics of top 20 enriched pathway terms in each pairwise. RichFactor is the ratio of differentially expressed gene numbers annotated in this pathway term to all gene numbers annotated in this pathway term. Greater richFactor means greater intensiveness. Qvalue is corrected pvalue ranging from 0 ~ 1, and less Qvalue means greater intensiveness.
