

A

B

**Figure S1.** (A) Titration of KPC: APC animals at different dose of Tamoxifen. \* indicates that the animals were alive till the end point of the study. (B) Is the decline of body weight of KPC: APC mice treated with a single dose of 100 microgram of tamoxifen. The results represent a mean ( $n = 3$ ) animals.

**Figure S2:** Control mouse tissue staining for (A) H & E, (B) PMS2, (C) MSH6, (D) MSH2 and (E) MLH1. No prominent nuclear staining has been observed. The tissue architecture is also intact (40 $\times$ ).

**Figure S3.** PET scan of CDX2 CRE ERT2 and APC f/f (video) showing much lesser degree of overall inflammation and tumor growth but with low SUV (<2.5).

**Figure S4.** KRAS+/- and APC f/f (video) post TAM induction showing normal colonic architecture.

**Table S1.** Mean numerical value of apoptosis gene transcripts expression of the negative control and tamoxifen treated groups ( $n = 3$  for each group).
