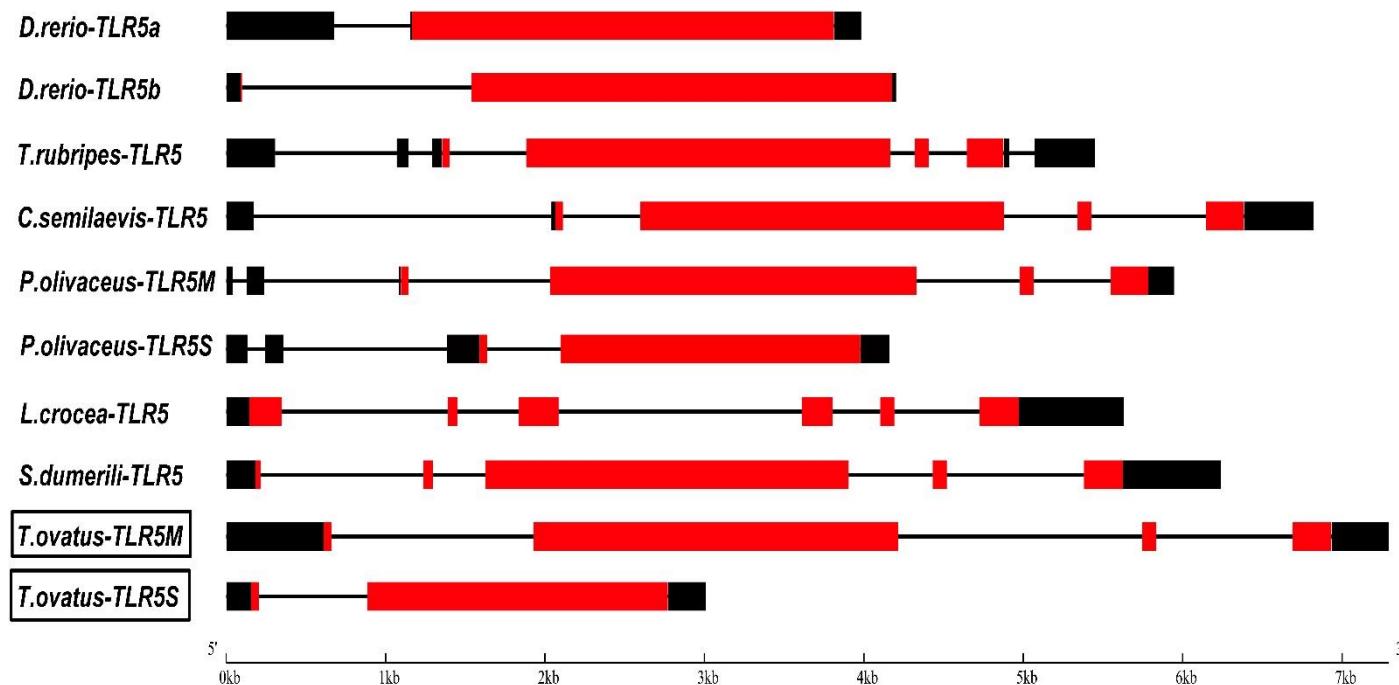

Figure S1. Comparison of the exon-intron organization of the *TLR5*. The boxes and bars represented the exons and introns, respectively. The boxes in black represented the UTR. The boxes in red represented the CDS. The *TLR5* sequence No. of each species: *D. rerio* (NC_007131.7); *T. rubripes* (NC_018905.1); *C. semilaevis* (NW_007585113.1); *P. olivaceus* (TLR5M: NW_017859659.1; TLR5S: NW_017860348.1); *L. crocea* (NC_040021.1); *S. dumerili* (NW_019174280.1).

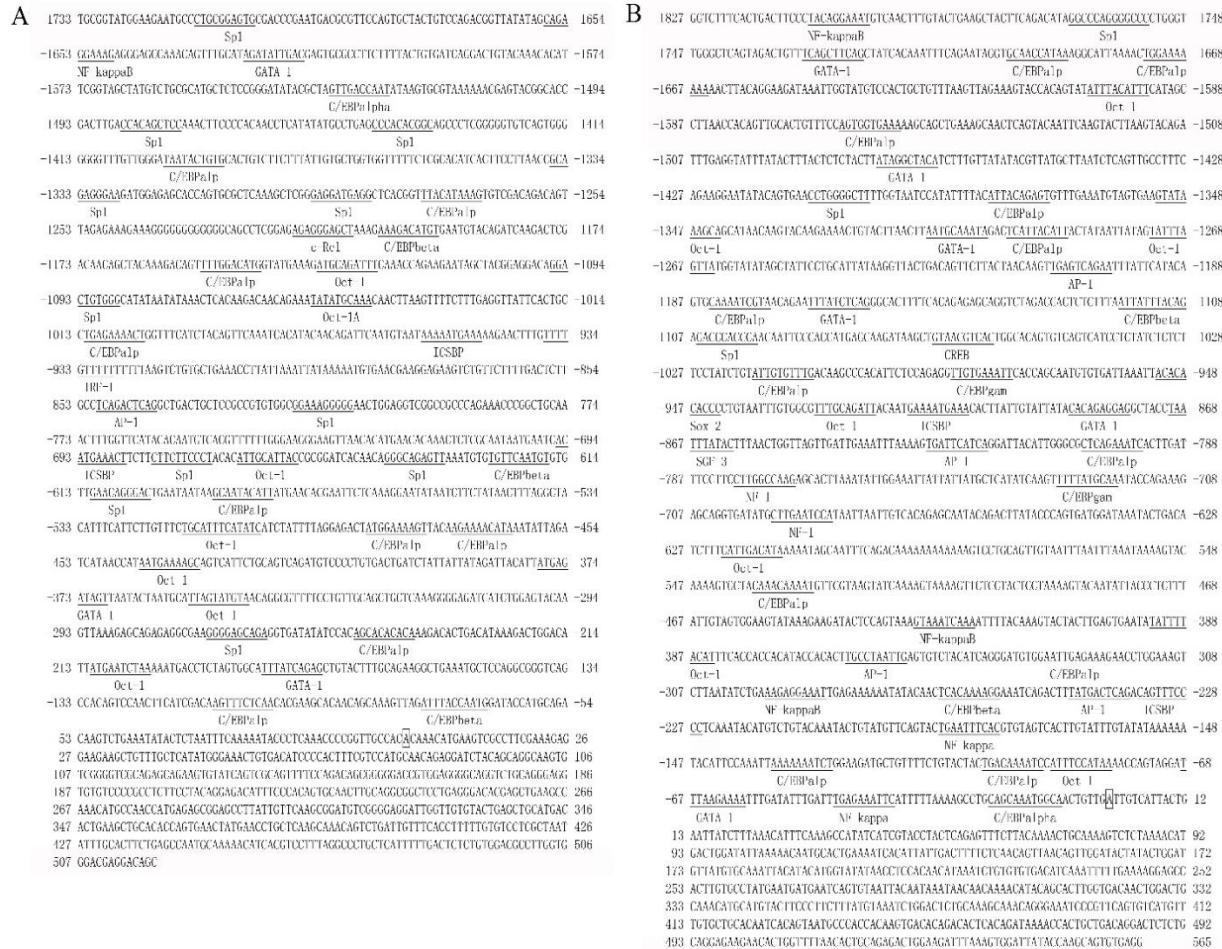

Figure S2. Analysis of the promoter sequences of *ToTLR5M* (A) and *ToTLR5S* (B). Nucleotide sequence of 5'-flanking regions of two *ToTLR5s*. The predicted transcriptional start site was expressed in a box and defined as +1; the predicted transcription factor binding sites were underlined. The box showed the transcriptional start site.
