

Figure S1: Gating strategy identifying tumor infiltrating lymphocytes in whole tissue sections using the software TissueQuest. Exemplary representation of flow cytometry-like scatter diagrams quantifying cytotoxic T cells ($CD3^+CD8^+FOXP3^-$), T helper cells ($CD3^+CD8^-FOXP3^-$), and regulatory T cells ($CD3^+CD8^-FOXP3^+$).

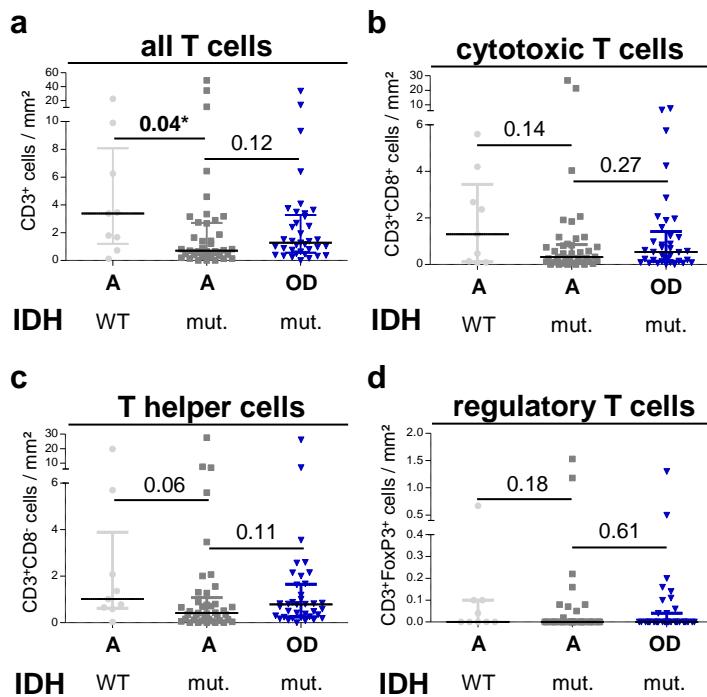

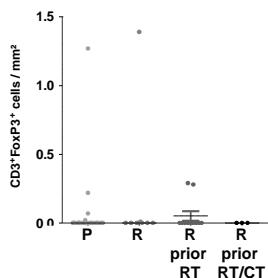

Figure S2: TIL infiltration rates in IDH^{wt} and IDH^{mut} LGG. Comparison of (a) all T cells, (b) cytotoxic T cells, (c) T helper cells and (d) regulatory T cells between IDH wild-type astrocytoma and IDH mutated astrocytoma/oligodendrogloma normalized to square millimeter. A, astrocytoma; OD, oligodendrogloma; WT, IDH-wild-type; mut., IDH mutated.

regulatory T cells

regulatory T cells

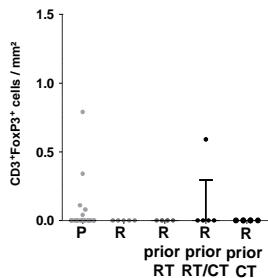

Figure S3: Infiltration rate of regulatory T cells in primary and recurrent IDHmut LGG according to the pretreatment. p, primary; r, recurrent; RT, radiotherapy; CT, chemotherapy; RT/CT, radiochemotherapy; mm^2 , square millimeter.

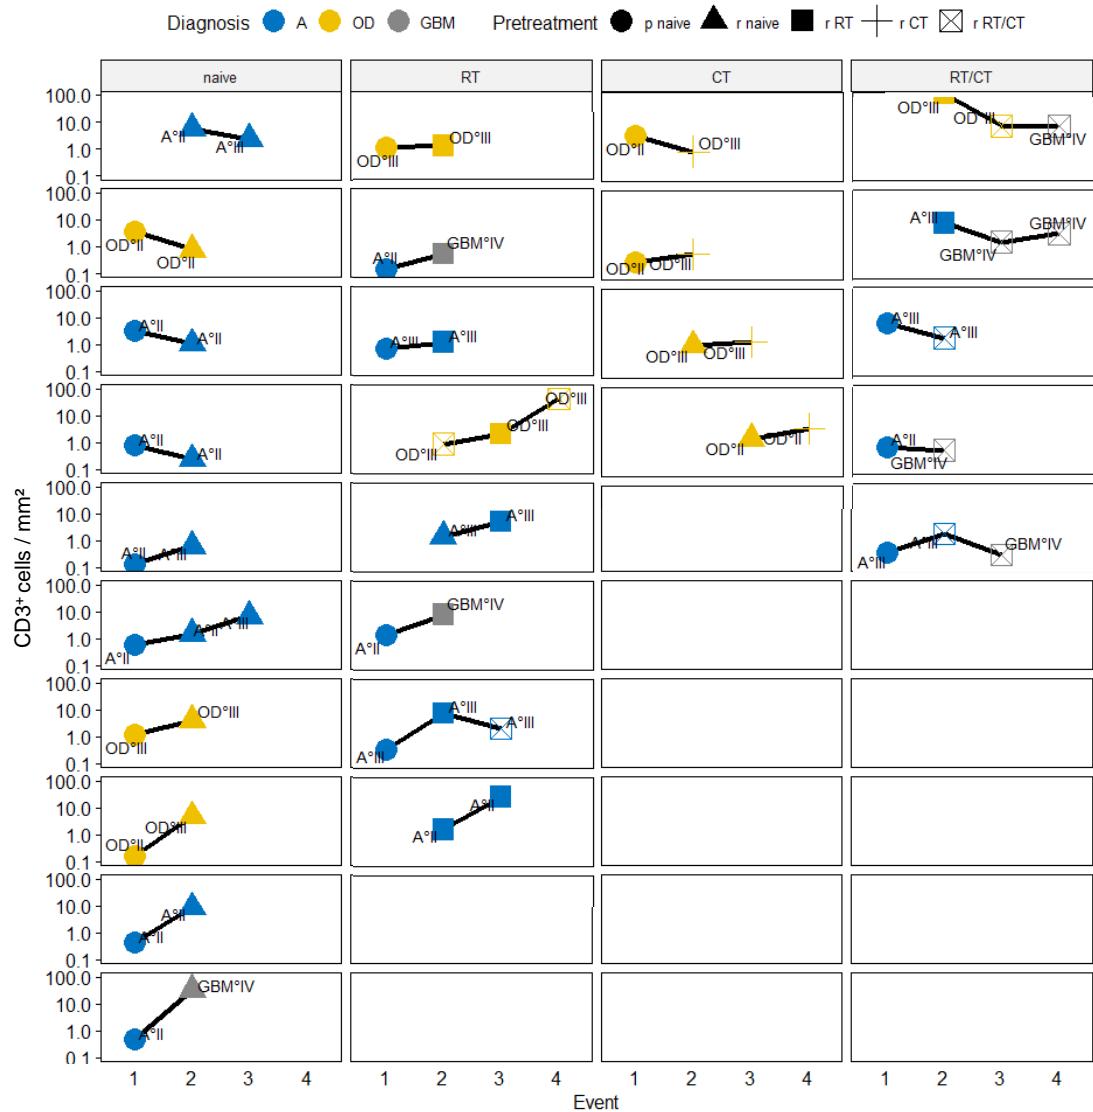

Figure S4: Overall T cell infiltration rate in paired IDH^{mut} LGG categorized according to the treatment of first tumor. Each box shows an individual patient and the numbers represent the tumor events starting from 1 as the initial glioma. Naïve, surgery only; RT, radiotherapy; CT, chemotherapy; RT/CT, radiochemotherapy; mm², square millimeter; A, astrocytomas; OD, oligodendroglomas, GBM, glioblastoma.

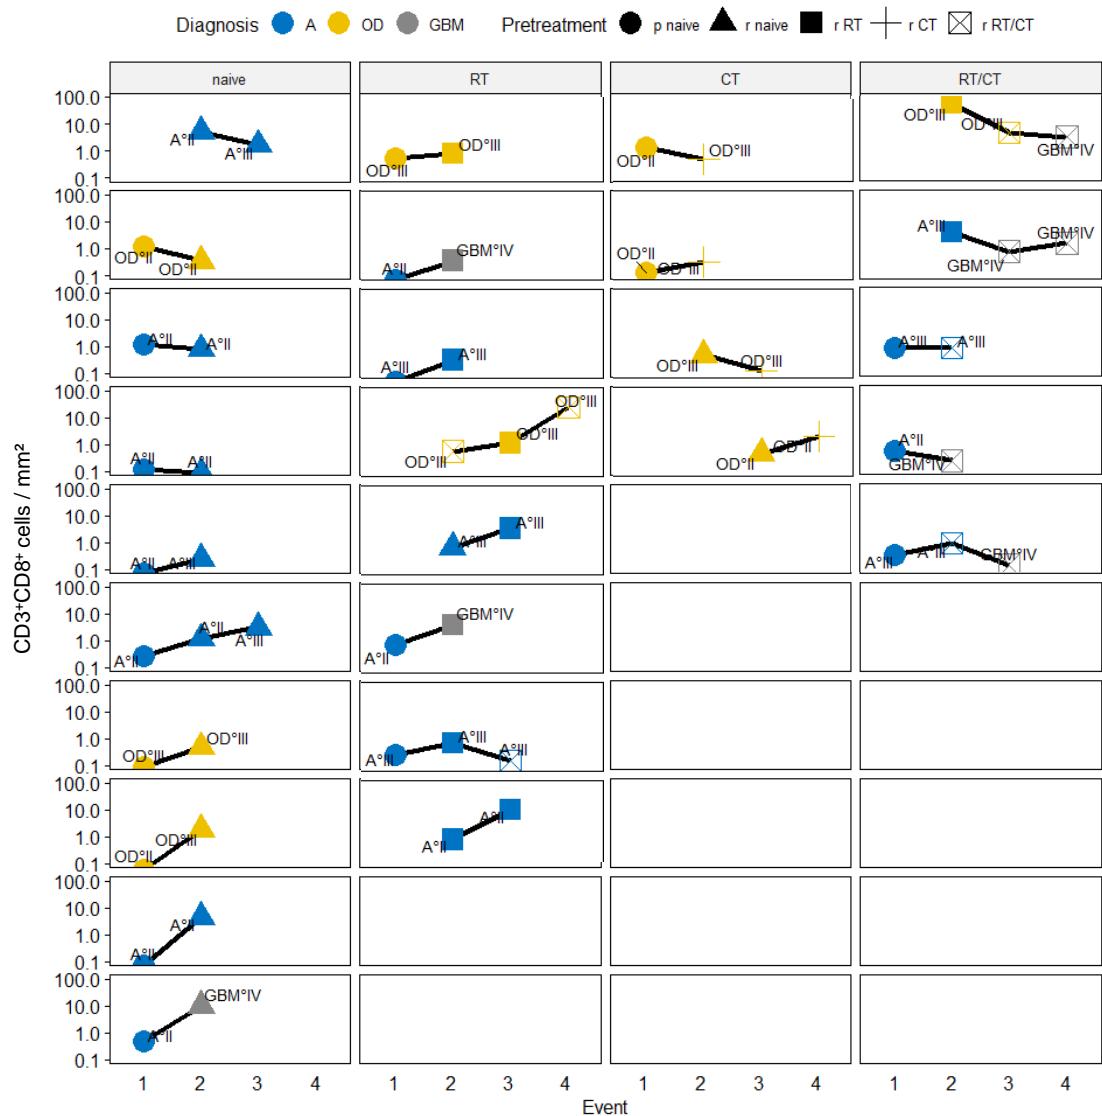

Figure S5: Cytotoxic T cell infiltration rate in paired IDH^{mut} LGG categorized according to the treatment of first tumor. Each box shows an individual patient and the numbers represent the tumor events starting from 1 as the initial glioma. Naïve, surgery only; RT, radiotherapy; CT, chemotherapy; RT/CT, radiochemotherapy; mm^2 , square millimeter A, astrocytomas; OD, oligodendroglomas, GBM, glioblastoma.

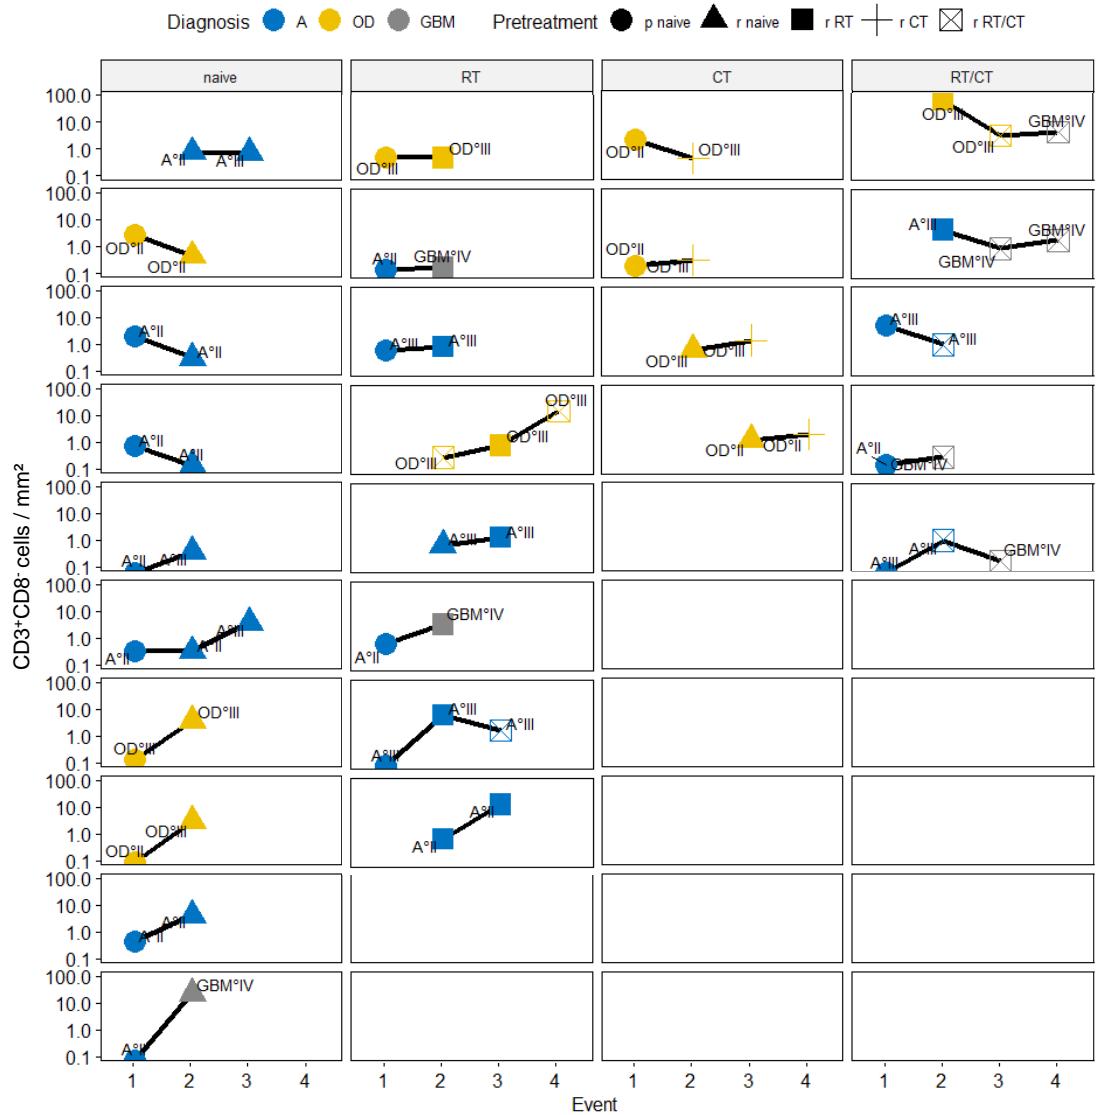

Figure S6: T helper cell infiltration rate in paired IDH^{mut} LGG categorized according to the treatment of first tumor. Each box shows an individual patient and the numbers represent the tumor events starting from 1 as the initial glioma. Naïve, surgery only; RT, radiotherapy; CT, chemotherapy; RT/CT, radiochemotherapy; mm², square millimeter A, astrocytomas; OD, oligodendroglomas, GBM, glioblastoma.

Table S1: Literature overview

Author, publication year	Journal	Main topic	Technique	Study sample	Study sample IDH ^{mut} tumors	Discrimination PT vs. RT	Treatment analysis
Berghoff et al., 2017	Neuro-Oncology	Differences in TIL infiltration and PD-L1 expression in IDH ^{mut} and IDH ^{wt} glioma	Immunohistochemistry for CD3 expression; data presentation as presence or absence of CD3 positive cells estimated in 100x magnification	IDH ^{mut} ; 22x A, 17x O; 14x GBM IDH ^{wt} ; 4x A,	N= 57	no	no
Bunse et al., 2018	Nature medicine	Functional impact of 2-HG on T cells in IDH ^{mut} glioma	Immunohistochemistry for CD4 or CD8 protein expression; analysis for presence or absence of CD4 or CD8 positive cells in 100x magnification	IDH ^{mut} -CD4: 22x A, 12x O, 24x OA -CD8: 36x A, 22x O, 31x OA IDH ^{wt} -CD4: 10x A, 1x O, 5x OA -CD8: 14x A, 2x O, 7x OA	CD4 N=58 CD8 N=89	60% PT, rest undefined	no
Kohanbash et al., 2017	JCI	Functional impact of 2-HG on T cells in IDH ^{mut} glioma	3 color immune fluorescence staining, software based quantitative assessment of entire tissue slices (200x magnification)	IDH ^{mut} ; 11x A, IDH ^{wt} ; 9x A	N=11	no	no
Zhang et al., 2018	CCR	2-HG in IDH ^{mut} gliomas inhibits complement and T cells	Immunohistochemistry for CD4, CD8 or FOXP3; cell counting in about 10 high power fields at 400x magnification	IDH ^{mut} ; 23x A, 14x GBM IDH ^{wt} ; 16x A, 19x GBM	N=37	PT	no
Makarevic et al. 2020	Current study (IJMS)	Therapy-associated T cell infiltration in primary and recurrent IDH ^{mut} glioma	4 color immune fluorescence staining, software based quantitative assessment of entire tissue slices (200x magnification)	IDH ^{mut} ; 71x A, 59x O; 14x sGBM IDH ^{wt} ; 9x A, 4x GBM	Primary N=78 Recurrent N=66	Yes Yes	Yes

A = astrocytoma; O = oligodendrogloma; OA = oligoastrocytoma; GBM = glioblastoma; PT = primary tumor; RT = recurrent tumor

Table S2. Progression free survival of patients with IDH^{mut} primary lower-grade glioma.

Variable	n = 78	Median progression free survival [months]	range
WHO grade II			
Astrocytoma	19	44.0	6.0 – 79.5
Oligodendrogloma	25	108.0	2.0 – 219.6
WHO grade III			
Astrocytoma	22	26.6	5.5 – 208.0
Oligodendrogloma	12	77.0	14.8 – 236.0

Table S3: Clinical data of patients with IDH1^{wt} primary glioma

Variable		n = 12	Patients [%]	Mean [range]
Sex				
	Male	8	57.14	
	Female	5	38.46	
Age¹				50.63 [15.92-75.68]
WHO grade				
	WHO grade II	Astrocytoma	2	15.38
	WHO grade III	Astrocytoma	7	53.85
	WHO grade IV	Glioblastoma	4	30.77

¹ At initial diagnosis [years]

Table S4: Primary anti-human antibodies

Antigen	Clone	Host spezies	IgG-Subtype	Source
CD3	polyclonal	rabbit	IgG	DAKO
CD8	YTC182.2	rat	IgG2b	Abcam
FoxP3	236A/E7	mouse	IgG1	Abcam

Table S5: Secondary antibodies

Antibody	Specificity	Host spezies	Source
Alexa Fluor® 647	anti-rabbit	goat	Invitrogen
Alexa Fluor® 488	anti-rat	donkey	Invitrogen
Alexa Fluor® 555	anti-mouse	goat	Invitrogen

Table S6: Isotype control antibodies

Antigen	Host spezies	Source
Isotype IgG	rabbit	OriGene Europe
Isotype IgG1	mouse	OriGene Europe
Isotype IgG2b	rat	OriGene Europe
