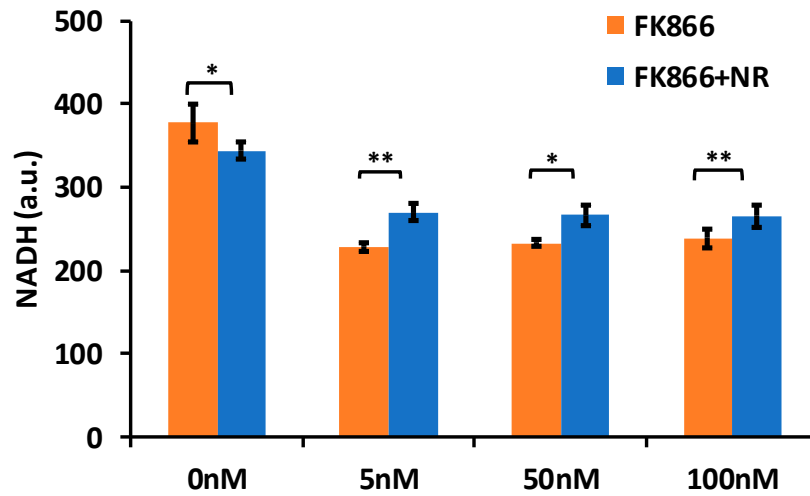

Figure S1. NR rescue effect on HCC1806 cells. Six hours NR treatment effects are nearly equivalent at various concentrations of FK866 ranging from 5 nM to 100 nM. Dishes were treated for 48 hours with FK866 (or 0.1% DMSO for control represented by 0 nM) with NR (0.8 mM) added after the first 42 hours of FK866 treatment ($n \geq 3$) (Unpaired t-test, * $p < 0.05$ and ** $p < 0.01$).
