Figure S1

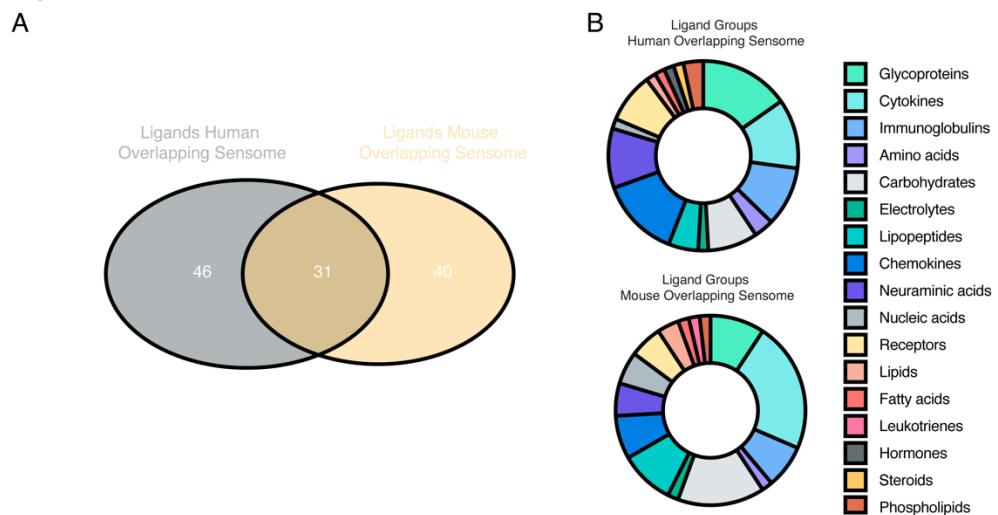

Supplemental Figure S1. Distinct difference in expression of 576 sensome genes comparing cortex versus microglia.
(A) This heatmap shows all 576 sensome candidate genes ordered by DE and with the left column shows if the gene is present in the “Hickman et al. sensome”

Figure S2

Supplemental Figure S2. Mouse sensome and human sensome genes categorized by group. (A) Bar graph showing the number of mouse and human sensome genes per group (Cell-Cell Interactions, Chemokine and related receptors, Cytokine receptors, ECM receptors, Endogenous ligands receptors, sensors and transporters, Fc receptors, Pattern recognition and related receptors, Potential sensors but no known ligands and Purinergic and related receptors).

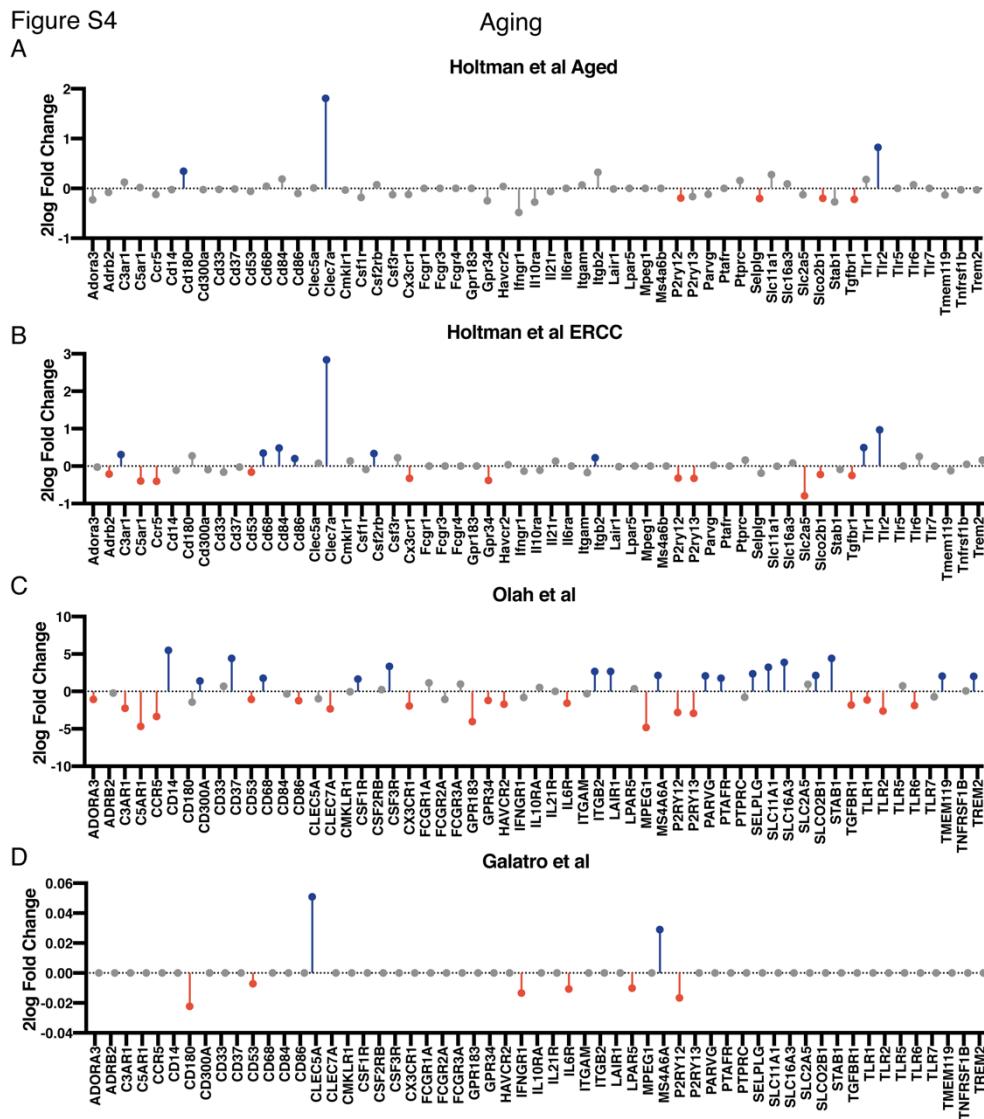

Figure S3

Supplementary Figure S3. Overlap of ligands recognized by microglia sensome (A) Overlap between the ligands of the receptors from respectively human and mouse core sensome was shown using Venn Diagrams. (B) Ligands of human and mouse receptors categorized in groups (Glycoproteins, Cytokines, Immunoglobulin, Amino acids, Carbohydrates, Electrolytes, Lipopeptides, Chemokines, Neuraminic acids, Nucleic acids, Receptors, Lipids, Fatty acids, Leukotrienes, Hormones, Steroids and Phospholipids) and spread of different groups shown as parts of whole again highlighting that the distribution of ligands what the human and mouse sensome genes can sense (Categorization of ligands in **Supplementary Table S1**).

Figure S4

A

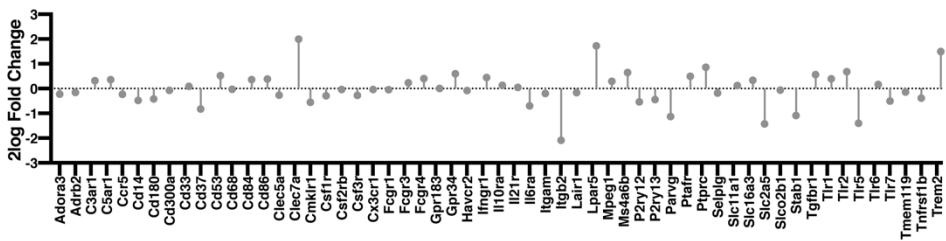

Supplementary Figure S4. Microglia core sensome expression during aging. (A) Two-log fold change of microglia core sensome genes in aging mice derived from Holtman et al. [12]. (B) Accelerated aging model (ERCC1), with impaired DNA repair mechanism, shows changes of microglia core sensome expression [12]. (C) Microglia core sensome expression during aging in human derived from Olah et al. [10]. (D) Gene expression data extracted from Galatro et al. showing the expression of microglia core sensome gene[15]. Red bars display showing gene significantly upregulated, blue bars represent gene significantly downregulated (Detailed expression data in **Supplementary Table S5**).

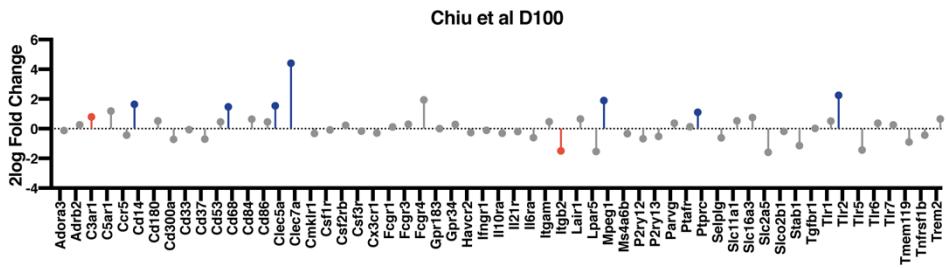

Figure S5

Amyotrophic lateral sclerosis (ALS)
Chiu et al D65

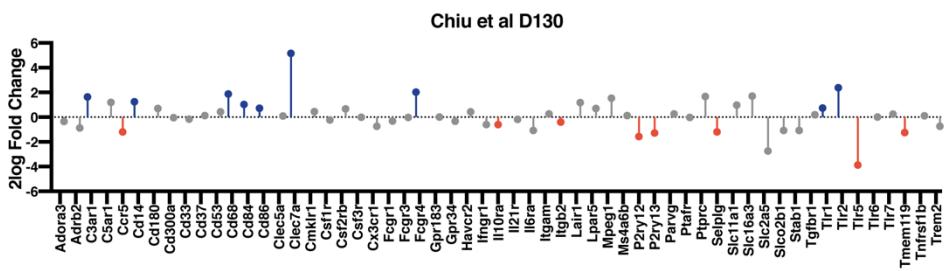

A

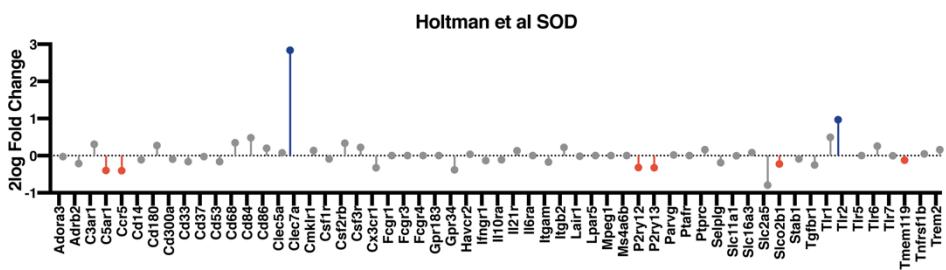

B

C

D

Supplementary Figure S5. Microglia core sensome expression in ALS. (A) Microglia core sensome expression during ALS disease progression (A) 65 days, (B) 100 days and at the end of disease (C) (130 days) after onset as analyzed by Chiu et al. [11]. (D) Microglia gene expression in control versus ALS mouse model (SOD1) derived from Holtzman et al. [12]. Red bars display showing gene significantly upregulated, blue bars represent gene significantly downregulated (Detailed expression data in **Supplementary Table S5**).

Figure S6

Supplemental Figure S6. Overlap of microglia core sensome in single cell microglia dataset. (A) Overlap between the microglia sensome extracted from bulk RNAseq data and a validation sensome extracted from single cell homeostatic microglia data. (B) Overlap between microglia core sensome and manually curated single cell sensome where genes were included as described in methods and material filtered from the highest average UMI from homeostatic [4].

Supplementary Table S1. Mouse and human sensome genes with ligands recognized by the receptors.
