

Supplementary Figure 1. Samples and reads mapped to t45. Top panel shows the reads for a representative sample. Bottom panel show the read depth plots and variants using IGV for a region around 7400 nt. The vertical axis is in logarithm scale. The pattern of variants is specific for most samples. Samples M-7460 and M-7461 looks the same in this region but the second region around 1,500nt show clear differences.
