

Heatmap and hierarchical clustering of the 32 differentially expressed miRNAs in gill of Atlantic salmon

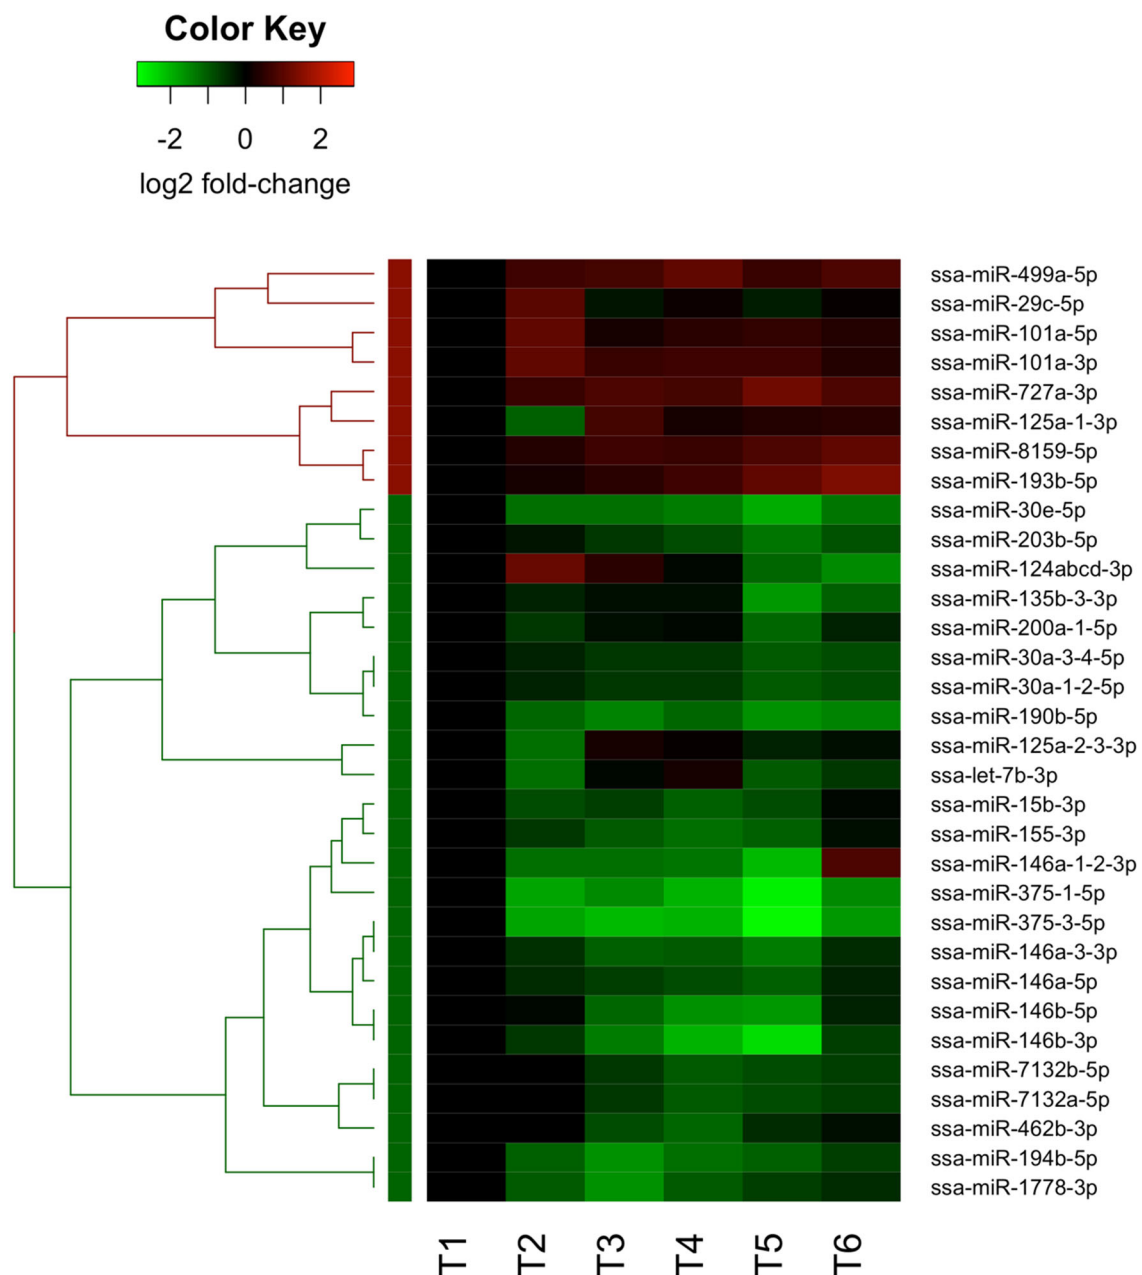

Figure S1. Heatmap and hierarchical clustering of the 32 differentially expressed miRNAs (DE-miRNAs). Each row represents a miRNA and each columns represents the expression changes at each time points relative to T1 (pre-smolt, one day before smoltification). T2-T4 and T5-T6 are relative expression changes during smoltification period and post SWT period, respectively. The dendrogram and the row side colours on the left show the two major clusters of DE-miRNAs (Cluster 1 – red and Cluster 2 – green).
