

Supplementary Figure S1. The efficiency of PLX3397 and minocycline. (A)

Representative images of microglial staining and the number of Iba-1+ microglia in the SN of mice for each group. (B) The representative images of microglial staining and the density of Iba-1 immunostaining in the SN of mice for each group. ** $p < 0.01$; Scale bar= 50 μm .

Supplementary Figure S2. SB-3CT blocks rotenone-induced activation of MMP-2/-9 in mice. (A) Representative blots of MMP-2/-9 in mice for each group. (B, C) The quantification of density of active MMP-2/-9 blots. * $p < 0.05$.
