

Supplementary figures and tables

Supplementary Figures

Figure S1 The distribution of GASMs on chromosomes in the NECSGP

Figure S2 Schematic map of four ecological ecoregions in Northeast China

Note: ERA: Eco-region of Heilongjiang valleys, including northern part of Inner Mongolia, the purple area in the picture, represented by Beian and Zhalantun; ERB: Eco-region of Songhuajiang valleys, pink area, represented by Keshan, Jiamusi, Mudanjiang, and Changchun; ERC: Eco-region of Nengjiang valleys, grass green area, represented by Baicheng and Daqing; ERD: Eco-region of Liaohe valleys, light blue area, represented by Tieling. The dissemination path of soybeans in Northeast China was from ERD to ERB, then from ERB to ERA and ERC. The upper right corner shows the location of the Northeast region in China.

Figure S3 The test site for alkali-tolerance at seedling stage for the NECSGP

Note: The paper roll hydroponics was used to grow seedlings. A pair of stress and non-stress (control) cups were placed together. The stress treatment was a mixed solution based on 1/2 Hoagland's nutrient solution added with NaHCO_3 ; Na_2CO_3 (9:1) into a concentration of 220 mM with pH=9.8 while the control used 1/2 Hoagland's nutrient solution only.

Supplementary Tables

Table S1 Source and maturity groups of the tested 361 varieties in NECSGP

Maturity group	HLJ	JL	LN	IM	Foreign	Total
000	14			2		16
00	40			5		45
0	136	10	1	5	5	157
I	47	30	1	1		79
II	5	34	4			43
III	1	6	14			21
Total	243	80	20	13	5	361

Note: HLJ, Heilongjiang province; JL, Jilin province; LN, Liaoning province; IM, Inner Mongolia autonomous region.

Table S2 ANOVA of ATI under three environments of the NECSGP

Source of variation	DF	MS	F value	P value
Environment	2	0.0052	5.96	0.0026
Replication (Environment)	6	0.0018	2.08	0.0053
Genotype	ERA	0.0611	96.01	<0.0001
	ERB	0.0854	57.64	<0.0001
	ERC	0.1995	283.74	<0.0001
	ERD	0.1072	138.92	<0.0001
	All	0.0875	101.29	<0.0001
Genotype × Environment	720	0.0015	1.70	<0.0001
Error	2,148	0.0009		
Total	3,236			

Table S3 Allele structure of 10 top alkali-tolerant and 10 top alkali-sensitive varieties

Type	Code	Variety	Ecoregion	ATI	Positive allele		Negative allele	
					No.	Mean-effect	No.	Mean-effect
Tolerant	F284	Mufeng No. 3	ERB	0.86	69	1.88	63	-1.72

Note: Gene code: such as *gATI.1.1* where ATI means alkali tolerance, .1 represents Chromosome 1 and .1 represents its order on the chromosome according to its physical position. The position corresponds to the Williams 82 reference genome version 1 (Wm82.a1).

R²: genetic contribution of a Gene.

Reported genes: the identified genes in this study are consistent to previously reported genes in SoyBase (<http://www.soybase.org>).

Table S5 Newly emerged/introduced positive ATI alleles in ERB of NECSP

Order	Allele code	Gene	Allele effect	Main-effect $R^2(\%)$	In accessions and crosses	Gene ontology

Note: In accessions and crosses: genes existed in the top ten accessions and top ten predicted crosses.

* nominated important alleles. In R^2 column, the digit in parentheses is the R^2 of G×E.
