Figure 1S_Canè et al.

Figure S1. MALDI-MS spectra of recombinant human TSLP in linear mode. The mass signals at m/z 15056.47, 7528.71, and 5019.88 correspond to the mono-, doubly- and triply-charged ions of the intact protein, respectively. From the measured mass value of these ions, a molecular weight of 15056.18 for TSLP could be calculated in agreement with the expected value (15056.46 Da).
